### **1. ABOUT THIS DOCUMENT**

#### NOTE

This document describes the maximal equipment of the **seca mVSA 535** product family: measurement of blood pressure, temperature, oxygen saturation and bioimpedance. Depending on the actual equipment of your device, some of this information may not be relevant to your device. Pay attention to the information in this document which is relevant to your device.

### 2. DESCRIPTION OF DEVICE

- → Intended use for seca mVSA 535
- → Functional description
- → User qualification
- → Contraindications

#### 2.1 Intended use for seca mVSA 535

The medical Vital Signs Analyzer **seca mVSA 535** is used in inpatient facilities (hospitals, medical practices and care facilities) in accordance with national regulations.

The medical Vital Signs Analyzer **seca mVSA 535** is used for non-invasive, discontinuous determination of arterial blood pressure and/or non-invasive determination of oxygen saturation of arterial hemoglobin and/or determination of body temperature and pulse rate and determination of weight and height.

The medical Vital Signs Analyzer **seca mVSA 535** is intended for use in children 3 years and older and adults.

#### 2.2 Restrictions on use of seca mVSA 535

The device is **not** intended for permanent monitoring of patients.

The device is **not** intended for patient monitoring during either transport (for example, in ambulances or helicopters) or transfer within an institution.

The device is **not** intended for operation in the vicinity of an MRI device or in a pressurized chamber.

The  $\text{SpO}_2$  measuring function of the device is **not** intended for monitoring apneas, detecting arrhythmias or for use during defibrillation or electrocauterization.

This device is **not** suitable for individuals who are connected to electronic lifesupport systems, for example artificial heart-lung machine.

### 2.3 Functional description

- → Device components
- → Power supply
- → Vital signs measurement
- → Alarms
- → Weight and height
- → User IDs of EMR systems
- → seca patient files
- → Patient data from EMR systems
- → Measured results
- → Data transmission and network functions
- → Compatibility

Device components	The seca mVSA 535 consists of a monitor and a SmartBucket.
	The monitor is for managing patient and user data and for preparing and analyzing measurements. The monitor is equipped with a touchscreen display.
	The SmartBucket includes the measuring equipment for recording vital signs and storage facilities for the measuring accessories.
	In the maximum configuration, the vital signs blood pressure, body tempera- ture, pulse rate and oxygen saturation can be recorded. Your version of the device may have a more limited functional scope.
Power supply	The monitor is powered by a connection to the power supply. The monitor has a lithium-ion rechargeable battery to provide a mobile power supply.
	The SmartBucket is supplied with power via a USB connection from the monitor.
Vital signs measurement	Blood pressure is measured non-invasively with seca measuring equipment and seca blood pressure cuffs.
	Temperature is measured with COVIDIEN <sup>™</sup> measuring equipment and, depending on the device version, as an oral/axillary (blue temperature probe), rectal (red temperature probe) or in-ear thermometer procedure.
	Depending on the device version, oxygen saturation is measured with Masimo SET <sup>®</sup> or with seca measuring equipment and with the corresponding $SpO_2$ sensors and patient cables.
	Depending on device version, pulse rate is determined using either oxygen saturation or blood pressure.
	Alternatively, a patient's vital signs can be entered manually.
Alarms	The device is intended for discontinuous measurement of vital signs, so it does <b>not</b> have an alarm function.
Weight and height	Scales and measuring rods with an internal interface module or a <b>seca 452</b> external interface module can transmit measured results to the device via LAN or WiFi.
	Alternatively, the patient's weight and height can be recorded manually.
User IDs of EMR systems	If the device is connected to an EMR system via the <b>seca connect 103</b> software, the user IDs of the EMR system can be used for measurements. Local user accounts on the device are required for administration and service tasks.
seca patient files	seca patient files and seca patient databases contain exclusively data neces- sary for working with seca products or which were determined using seca products.
	In stand-alone mode, measured results are managed in seca patient files. seca patient files can be set up, edited, exported and deleted directly on the device.
Patient data from EMR systems	Depending on the EMR system in question, patient data from EMR systems can be used by means of a connection to the <b>seca connect 103</b> software.
Measured results	Measured results for the vital signs blood pressure (NIBP), temperature (TEMP), pulse rate (PR) and oxygen saturation (SpO <sub>2</sub> ) are displayed in graphical form.

The device can be integrated into a network via a LAN interface or via WiFi in order to use the following functions:
• Connection of the device to the <b>seca connect 103</b> software available as an option: Using the user and patient data of an EMR system and submitting measured results to the EMR system
<ul> <li>seca 360° proximity connection: Receiving weight and height from scales and measuring rods with an internal interface module or a seca 452 external interface module</li> </ul>
Measured results for the parameters blood pressure, body temperature, pulse rate and oxygen saturation are transmitted from the SmartBucket to the monitor via a USB connection.
seca connect 103 software
This device (software version 2.0, Build 1444 or higher) is only compatible with version 3.1 or higher of the <b>seca connect 103</b> software. There is no downward compatibility with older versions of the <b>seca connect 103</b> software.
Internal interface module/seca 452 interface module
This device (software version 2.0, Build 1444 or higher) is only compatible with interface modules on which firmware version R1.3 Build 79 or higher is installed.
→ Administration/network connection
→ Measuring mode
The device may only be set up and incorporated in a network by experienced administrators or hospital technicians.
The device may only be used by persons with sufficient expertise.
Basic knowledge required for measuring vital parameters is <b>not</b> the subject of these instructions for use.
Connecting the device to an EMR system affects the measuring sequence and operation of the device: $\rightarrow$ Operation when connected to an EMR sys- tem. People operating the device must be informed about these effects.

This device is not suitable for persons with the following characteristics:

- Cramps
- Tremors

### 3. SAFETY PRECAUTIONS

- → Safety precautions in these instructions for use
- → Basic safety precautions

#### Safety precautions in these instructions for use 3.1

#### DANGER!

Used to identify an extremely hazardous situation. If you fail to take note of this information, serious irreversible or fatal injuries will occur.

#### WARNING!

Used to identify an extremely hazardous situation. If you fail to take note of this information, serious irreversible or fatal injuries may result.

#### **CAUTION!**

Used to identify a hazardous situation. If you fail to take note of this information, minor to moderate injuries may result.

#### NOTICE!

Used to identify possible incorrect usage of the device. If you fail to take note of this information, you may damage the device, or the measured results may be incorrect.

#### NOTE

Includes additional information about use of the device.

#### 3.2 Basic safety precautions

- → Handling the device
- → Handling a wheeled stand
- → Preventing electric shock
- → Prevent injuries and infections
- → Preventing damage to device
- → Handling measured results
- → Handling packaging material
- → Handling batteries and rechargeable batteries
- Please take note of the information in these instructions for use.
- ► Keep the instructions for use in a safe place. The instructions for use are a component of the device and must be available at all times.
- In the interest of patient safety, you and your patients are obliged to report serious events that occur in connection with this product to the manufacturer and the authority responsible in your country.

### **Risk of explosion**

Do not use the device in an environment in which one of the following gases has accumulated:

- oxygen
- flammable anesthetics
- other flammable substances/air mixtures

Handling the device

#### CAUTION! Patient hazard, damage to device

- Additional devices which are connected to electrical medical devices es must provide evidence of compliance with the relevant IEC or ISO standards (e.g. IEC 60950 for data-processing devices). Furthermore, all configurations must comply with the requirements of standards for medical systems (see IEC 60601-1-1 or Section 16 of edition 3.1 of IEC 60601-1, respectively). Anyone connecting additional devices to electrical medical devices is considered a system configurer and is therefore responsible for ensuring that the system complies with the requirements of standards for systems. Your attention is drawn to the fact that local laws take precedence over the above-mentioned requirements of standards. In the event of any queries, please contact your local specialist dealer or Technical Service.
- Please have servicing and measuring technology checks performed every two years.
- Technical modifications may not be made to the device. The device does not contain any parts for servicing by the user. Only have servicing and repairs performed by an authorized seca Service partner. You can find service partners in your area at www.seca.com or by sending an e-mail to service@seca.com.
- Only use original seca accessories and spare parts, otherwise seca will not grant any warranty.

### 

#### **!** Patient hazard, malfunction

- Keep other electrical medical devices, e.g. high-frequency surgical devices, a minimum distance of approx. 1 meter away to prevent incorrect measurements or wireless transmission interference.
- Keep HF devices such as cell phones a minimum distance of approx. 1 meter away to prevent incorrect measurements or wireless transmission interference.
- The actual transmission output of HF equipment may require minimum distances of more than 1 meter. Details can be found at www.seca.com.

#### WARNING!

#### <u>!</u> Injury from falling, damage to device

 When transporting the device on a wheeled stand, make sure that all cables and tubes are stowed properly directly on the machine or in the basket of the stand.

### ▲ CAUTION!

- Damage to device
  - Do not pull on cables and tubes to move the equipment or wheeled stand.
  - Do not move the wheeled stand when the power cord of the device is plugged into an electrical outlet.

17-10-05-395-002\_12-2021B

#### Handling a wheeled stand

#### **Preventing electric shock**

#### WARNING! Electric shock

- Set up devices which can be operated with the electricity supply so that the power supply socket is within easy reach and the power supply can be disconnected quickly.
- Ensure that your local power supply matches the details on the device.
- Connect this device only to a power supply with a protective earth facility.
- Do not connect the device to a power supply network if there is any uncertainty about whether the protective earth is functioning. In this case, use the device exclusively in rechargeable battery mode.
- Do not connect the device to sockets that are switched by an on/off switch or a dimmer.
- Never touch the power supply cable with wet hands.
- Do not use extension cables or power strips.
- Make sure that cables are not pinched or damaged by sharp edges.
- Make sure that cables do not come into contact with hot objects.
- Do not operate the device at an altitude of more than 3000 m above sea level.

### Prevent injuries and infections

#### WARNING! Injury from falls

- ► Ensure that the device is positioned firmly and level.
- Route connecting cables (if present) in such a way that neither user nor patient can trip over them.

### WARNING!

- Risk of infection
- Before and after every measurement, wash your hands to reduce the risk of cross-contamination and nosocomial infections.
- Hygienically reprocess the device regularly as described in the respective section in this document.
- Make sure that the patient has no infectious diseases.
- Make sure that the patient has no open wounds or infectious skin alterations, which may come into contact with the device.

#### Preventing damage to device

#### NOTICE! Damage to device

- If liquids have penetrated the device, the device may not be operational for a short period. Allow the device to dry for an extended period (e.g. overnight), before starting it up again.
- Switch off the device before you take the power supply connector out of the power supply socket.
- If you are not going to use the device for an extended period, disconnect the power supply connector from the power supply socket and remove the rechargeable battery (if present and removable). Only then is the device de-energized.
- Make sure not to drop the device.
- Do not expose the device to any impacts or vibrations. ►
- Ensure that there is no heat source in the immediate vicinity. Do not expose to direct sunlight. The excessive temperature could damage the electronics.
- Ensure that the air openings of the device (if present) are not covered.
- Perform function controls regularly as described in the relevant section in this document. Do not operate the device if it is damaged or not working properly.
- Avoid rapid temperature fluctuations. When the device is transport-► ed so that a temperature difference of more than 20 °C occurs, it must stay turned off for at least 2 hours before it can be turned on again. Otherwise, condensation water will form which can damage the electronics.
- Use the device only in the intended ambient conditions.
- Store the device only in the intended storage conditions.
- Use only disinfectants free of chlorine and alcohol which are explicitly suitable for acrylic sheet and other sensitive surfaces (active ingredient: guaternary ammonium compounds, for example).
- Do not use aggressive or abrasive cleaning agents.
- Do not use organic solvents (e.g. white spirit or petroleum spirit).
- ► Use disinfectants including the active ingredient 70 % isopropanol only for measuring accessories for measuring vital signs.

### Patient hazard

In order to avoid misinterpretations, measuring results for medical use must be displayed and used in SI units (weight: kilogrammes, length: metres) only. Some devices offer the ability to display measuring results in other units. This is only an additional function.

- Use the results exclusively in SI units.
- The use of measuring results in non-SI units is the sole responsibility of the user.

#### NOTICE!

#### Inconsistent measuring results

- Before you electronically save measured values determined using this device and use them further (e.g. in seca software or in an EMR system), make sure that the measured values are plausible.
- If measured values are transmitted to seca software or an EMR system, make sure prior to further use that the measured values are plausible and are assigned to the correct patient.

Handling measured results

#### NOTE

For an overview of the parameters which can be determined using this device, see the section entitled "Technical data\analysis parameters". If necessary, you can print out this overview and give it to your patients (print-out from the device not possible).

WARNING! Risk of suffocation

Packaging material made of plastic foil (bags) is a choking hazard.

- ► Keep packaging material out of reach of children.
- In the event that the original packing material may not be available anymore, only use plastic bags with security holes in order to reduce the risk of suffocation. Use recyclable materials if possible.

#### NOTE

Keep the original packing material for future use (e.g. returning for servicing).

#### WARNING!

#### Personal injury as a result of improper handling

Batteries and rechargeable batteries contain harmful substances which may explode if not handled properly.

- Do not try to recharge batteries.
- Do not expose (rechargeable) batteries to heat.
- ► Do not burn (rechargeable) batteries.
- If acid is leaking out, avoid contact with the skin, eyes and mucous membranes. Rinse affected areas with plenty of clean water and seek medical help at once.

#### NOTICE!

#### Damage to device and malfunctions with improper handling

- Only use the type of (rechargeable) battery specified in this document.
- When replacing (rechargeable) batteries, always replace a complete set at a time.
- ► Do not short-circuit (rechargeable) batteries.
- If you do not use the device for a long period of time, remove the (rechargeable) batteries. This prevents acid from leaking into the device.
- If acid leaked into the device, discontinue use. Have the device checked by an authorised seca service partner and repaired if necessary.

### 4.1 Monitor controls for seca mVSA 535

#### NOTE

This section shows product versions. The functional scope of your device may deviate from this.

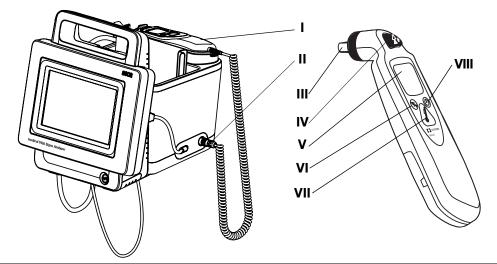

No.	Controls	Function
1	Handle	Transporting the device
2	Touchscreen display	Central control/display element
		LED white: Device on
3	ON/OFF key with LED	LED green: Device on standby
		LED off: Device off
	Connection for temperature	For COVIDIEN <sup>™</sup> FILAC <sup>™</sup> 3000 temperature probes
4	measurement	<ul> <li>Blue: Oral/axillary measurement</li> </ul>
	measurement	Red: Rectal measurement
	Probe holder	For COVIDIEN <sup>™</sup> FILAC <sup>™</sup> 3000 temperature probes
5		<ul> <li>Blue: Oral/axillary measurement</li> </ul>
		Red: Rectal measurement
6	Storage compartment for probe covers	Capacity: 2 packs for COVIDIEN™ FILAC™ 3000
		For transmitting data via a USB memory stick
7	USB interface, 2 pcs	For transmitting data between monitor and SmartBucket
· ·	USD interface, 2 pcs	For supplying SmartBucket with power
		Connecting the scanner
8	ISIS interface	Advance feature for future system upgrade (currently no function)

No.	Controls	Function
9	LAN interface	Integrating the device in a network (using the <b>seca connect 103</b> software for connection to an EMR system)
10	Rechargeable battery compartment	To take lithium-ion rechargeable battery supplied
11	Internal WiFi module	Integrating the device in a network (using the <b>seca connect 103</b> software for connection to an EMR system)
12	SmartBucket	Transporting/storing the metrology equipment For storing consumables
13	Connecting cable with USB connector	For power supply and data transmission between monitor and SmartBucket
14	Sensor holder	For SpO <sub>2</sub> sensor
18	Connection for SpO <sub>2</sub> measurement	<ul> <li>Masimo SET® patient cables and sensors (no illustration)</li> <li>seca patient cables and sensors (shown in illustration)</li> </ul>
19	Connection for blood pressure measurement	For seca blood pressure cuffs
20	Power supply connection socket	For connecting the power supply cable
21	Removable magazine holder for probe covers	Capacity: 2 magazines for COVIDIEN™ GENIUS®3
19	Thermometer compartment	For COVIDIEN™ GENIUS®3 in-ear thermometer
20	Connection for temperature measurement	For COVIDIEN <sup>™</sup> GENIUS <sup>®</sup> 3 in-ear thermometer

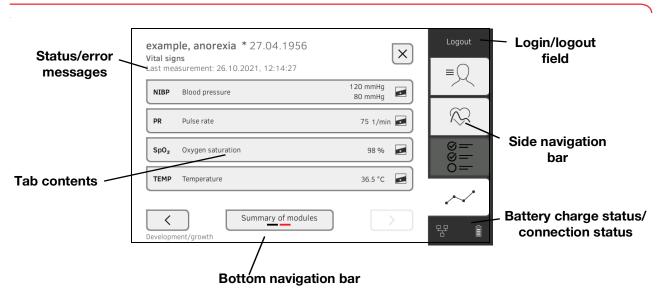

### 4.2 In-ear thermometer controls

#### NOTE

The illustration shows one equipment example. The actual functional scope of your device may deviate from this.

No.	Control	Function
I	Thermometer	COVIDIEN™ GENIUS®3 in-ear thermometer
II	Connection for temperature measurement	For COVIDIEN <sup>™</sup> GENIUS <sup>®</sup> 3 in-ear thermometer
111	Measuring head	For measuring temperature in ear
IV	Discard key	For discarding probe cover
V	In-ear thermometer display	Serves as a secondary display. seca mVSA 535 display takes priority
VI	Switch unit key	Switch between °C and °F
VII	Measure key	Press key to start measurement
VIII	Pulse timer key	Not relevant for <b>seca mVSA 535</b> . Pulse rate is determined automatically by the <b>seca mVSA 535</b>

### 4.3 Fields in the touchscreen display

4.4 Login/navigation: Keys and symbols in the touchscreen display

### 4.6 Measuring: Keys and symbols

- → Patient tab
- → Vital signs tab
- $\rightarrow$  Clinical observations tab
- → Analysis tab

#### Patient tab

	Key/symbol	Meaning
=	0	Search for seca patient file
	▲ ▼	Switch sorting direction
		Edit seca patient file
	Ŀ	Export seca patient file
		Delete seca patient file
	Q	Adopt value from previous measurement
	×	Close seca patient file, changes will not be saved

#### Vital signs tab

$\sim$	Key/symbol	Meaning
$\gg$	NIBP	Blood pressure measured non-invasively
	O	Start blood pressure measurement
		Blood pressure measurement in progress
	1. <del>117/77</del> 2.116/63 3.123/80	Blood pressure: Multiple measurement: First measurement will be discarded
		Blood pressure: Multiple measurement: Waiting time until next part-measurement running
	SYS/DIA	Blood pressure: Systolic/diastolic pressure
		Systeme diastence pressure

17-10-05-395-002\_12-2021B

Key/symbol	Meaning
MAP	Blood pressure: Mean arterial pressure
≈ ≫	Blood pressure: Upward measurement, downward measurement
• :	Blood pressure: Single measurement, multiple measurement
TEMP	Temperature
▶ 🔒 💧	Temperature measuring mode: Predictive, direct
ſĿ	Manual measured value input
<b></b>	COVIDIEN™ FILAC™ 3000 temperature probe Measuring position: Oral, axillary, rectal
2	COVIDIEN™ GENIUS®3 in-ear thermometer Measuring position: in-ear
PR	Pulse rate
♥ ≑♥	Measuring range for pulse rate: Default, extended
SpO <sub>2</sub>	Oxygen saturation in %
PI	Devices with Masimo SET <sup>®</sup> measuring equipment: Perfusion index, information on the quality of perfusion (min: 0.02 %, max: 20 %)
	Devices with Masimo SET <sup>®</sup> measuring equipment, oxygen saturation measuring mode: Normal, APOD, maximum
<u>^</u> ^^*	Devices with seca measuring equipment, oxygen saturation measuring mode: Stable, default, sensitive
	Write comment
	Call up list of unsubmitted measurements
Q	Adopt value from previous measurement
$\checkmark$	Save measurement
×	Discard measurement

### **Clinical observations tab**

$\otimes =$	Key/symbol	Meaning
©= 0=		Position indicator for pages, here: Page 1 of 2
	$\checkmark$	Adopt observations
	×	Delete observations
	Level of consciousness	Yellow marking: Mandatory field

Analysis tab

22 • seca mVSA 535

	Key/symbol	Meaning
$\sim$		View history
		Position indicator for analysis modules, here: second module of 5
		Position indicator for analysis parameters, here: second analysis parameter of 4
	M	Detail view available for analysis parameter: Percentile curve
	Average (NIBP)	Blue marking: Mean value

### 4.7 Unsubmitted measurements list: Symbols

Key/symbol	Meaning	
	Clinical observations	_
凸	Weight (W)	
$\uparrow$	Height (H)	
$\stackrel{\uparrow}{\longrightarrow}$	Body mass index (BMI)	
-\/-	Pulse rate (PR)	
$(\cdot)$	Blood pressure (NIBP)	21B
<u>(°2</u> )	Oxygen saturation (SpO <sub>2</sub> )	17-10-05-395-002_12-2021B
J	Temperature (Temp)	10-05-395-
		17

Key/symbol	Meaning
Average (NIBP)	Blue marking: Mean value
FN222225852 FN222225852	Yellow marking (when connected to EMR system): Unconfirmed offline measurement

### 4.8 Markings on the device and on the type plate

Text/symbol	Meaning
	Name and address of manufacturer, date of manufacture
REF	Model number
SN	Serial number, consecutive
ProdID	Product identification number, consecutive
Mat.No.	Variant number
	Follow Instructions for Use
<b>T</b>	Medical electrical device, type BF
-  <b>†</b>  -	Medical electrical device, type BF (defibrillation-protected)
	Insulated device in accordance with IEC 60601-1: Protection class II
<i>≜</i>	Device with functional grounding in accordance with IEC 60601-1: The third wire of the power supply connecting cable is the functional ground
$\bowtie$	No alarm function
IP21	<ul> <li>Type of protection in accordance with IEC 60529:</li> <li>Protection against ingress of solid foreign bodies with a diameter of over 12.5 mm</li> <li>Protection against access with fingers</li> <li>Protection against drips</li> </ul>
IP22	<ul> <li>Type of protection in accordance with DIN EN 60 529:</li> <li>Protection against ingress of solid foreign bodies with a diameter of over 12.5 mm</li> <li>Protection against access with fingers</li> <li>Protection against dripping water when the housing is tilted up to 15°</li> </ul>
Li-ion	Lithium-ion rechargeable battery
<b>CE</b> 0123	Device complies with EC directives • 0123: appointed office for medical devices

Text/symbol	Meaning	
	Product complies with the applicable regulations of the United Kingdom	
UK CA	Authorized person and importer: seca Ltd 40 Barn Street	
	Birmingham B5 5QB United Kingdom	
F©	Symbol of the US Federal Communications Commission (FCC)	
FCC ID	Device license number from the Federal Communications Commission (FCC)	
IC	Device license number from Industry Canada	
xxx-yyy V ~ min xx-yy Hz xx A	Type plate for power supply socket: • Permitted supply voltage • Permitted power supply frequency • Power consumption	
⊙/Ò	ON/OFF key	
	Inductive charging interface	
모모	LAN interface	
●	USB interface	
NIBP	Connection of blood pressure cuff	
TEMP	Connection of temperature sensor	
SpO <sub>2</sub>	Connection of SpO <sub>2</sub> sensor	
X	Do not dispose of device with household waste	

### 4.9 Markings on the blood pressure cuff

Text/symbol	Meaning
Ĩ	Follow instructions for use
ÊÊÊÊ XSSMÛ XI XXI	Cuff size (here: L)
size L © 32-42 cm	Cuff suitable for specified arm size
	Artery position: These arrows must be on the brachial or femoral artery when blood pressure cuff is put on.
	Cuff end: These markings must be within the adjustment range when closing the blood pressure cuff.
	Adjustment range: The marking "Cuff end" must be in this range when closing the blood pressure cuff. This area also contains the cuff size (here: L).
	This side facing the patient
LATER	Latex-free
	Name and address of manufacturer
	Date of manufacture
	Name and address of distributor
REF	Model number
LOT	Lot number
CE	The blood pressure cuff complies with EU directives

### 4.10 Markings on the packaging

Text/symbol	Meaning
Ť	Protect from moisture
	Arrows indicate top of product Transport and store in an upright position
	Fragile Do not throw or drop
X	Permitted min. and max. temperature for transport and storage
<u> </u>	Permitted min. and max. humidity for transport and storage
<b>†</b> †	Open packaging here
C	Packaging material can be disposed of through recycling programs

### 4.11 Other symbols

Depending on device version, the symbols below may be applied to accessories and consumables and their packaging.

Text/symbol	Meaning
NON	Not sterile
(	Do not reuse
A	Small parts present a danger of suffocation if swallowed.
*	Keep out of sunlight
	Only use indoors
(((•)))	Non-ionizing radiation
DEHP	DEHP-free
LATER	Latex-free
MR	Not resistant to magnetic resonance
	Do not use if packaging damaged
LOT	Lot number
EC REP	Person with authority in the EU

17-10-05-395-002\_12-2021B

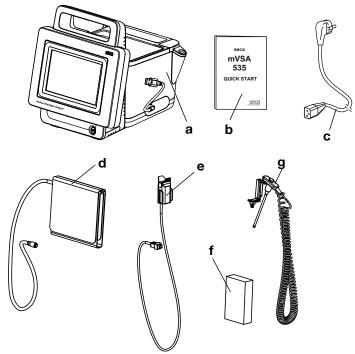

### 5. STARTING UP THE DEVICE

- → Scope of delivery
- → Setting up device
- → Establishing a power supply
- → Charging rechargeable battery
- → Setting the date and time
- $\rightarrow$  Initial login
- $\rightarrow$  Configuration options

### 5.1 Scope of delivery

#### NOTE

This section shows version 535-1110-001 by way of an example. The scope of delivery of your device may deviate from this. An overview of versions can be found at www.seca.com.

No.	Standard scope of delivery	
а	Monitor to suit the version ordered	1
b	Quick Start brief instructions, printed	1
С	Power supply cable (country-specific)	1-3
-	Accessories to suit the version ordered	-

No.	Accessory for the version shown	Pcs.
d	seca blood pressure cuff, size M	1
•	<ul> <li>SpO<sub>2</sub> sensor (Masimo SET<sup>®</sup> or seca)</li> </ul>	1
е	<ul> <li>Patient cable (Masimo SET<sup>®</sup> or seca), not illustrated</li> </ul>	1
f	COVIDIEN <sup>™</sup> FILAC <sup>™</sup> 3000 probe covers	1
•	(pack of 20 pcs)	
g	COVIDIEN <sup>™</sup> FILAC <sup>™</sup> 3000 temperature probe	1

- → Connecting the SmartBucket
- → Connecting the blood pressure cuff
- → Connecting the temperature probe
- → Connecting the in-ear thermometer
- $\rightarrow$  Connecting the seca SpO<sub>2</sub> sensor
- → Connecting the Masimo SET® SpO<sub>2</sub> sensor

#### NOTE

This section shows how to assemble all of the measuring accessories available for this device. The actual scope of delivery of your device may be less than this.

#### NOTICE!

#### Damage to device, malfunction

Excessive use of force may damage tubes and cables.

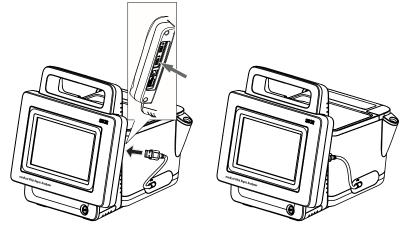

- In order to connect measuring accessories to the device or remove them from it, take hold of tubes only by the tube coupling.
- In order to connect measuring accessories to the device or remove them from it, take hold of cables only by the connectors.
- Use only measuring accessories which have no externally visible damage.

#### **Connecting the SmartBucket**

#### NOTICE! Malfunction

The SmartBucket needs one of the USB interfaces for communication and power supply. If the USB connection is removed, no vital signs can be measured.

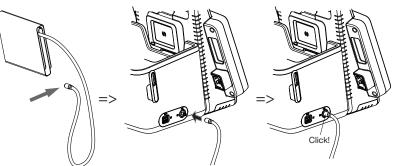

- ► Always keep the SmartBucket connected to the USB interface.
- Only connect accessories, for example a USB memory stick, to the other USB interface.

 Connect the USB cable of the SmartBucket to a free USB port of the monitor.

#### Connecting the blood pressure cuff

1. Connect the tube coupling for the blood pressure cuff to the compressed air connection of the device until you hear the tube coupling engage.

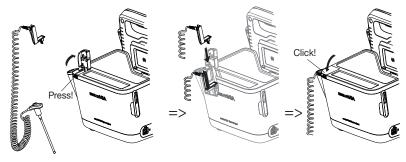

2. Stow the blood pressure cuff in the SmartBucketas shown in the illustration below.

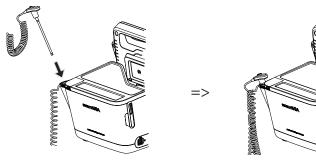

#### Connecting the temperature probe

- 1. Open the cover cap of the connection compartment.
- 2. Insert the connector for the temperature probe in the probe connection completely as shown in the illustration below.
- 3. Close the cover cap of the connection compartment.

4. Push the temperature probe into the probe holder completely as shown in the illustration below.

### NOTICE!

#### Damage to device, malfunction

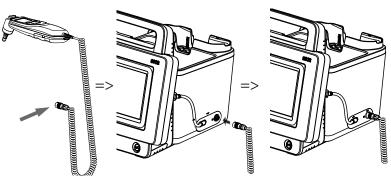

The temperature probe can only be pushed right into the probe holder if it does not have a probe cover on.

• Ensure that there is no probe cover on the temperature probe.

#### NOTE

The storage compartment on the probe connection provides space for two packs of probe covers.

#### Connecting the in-ear thermometer

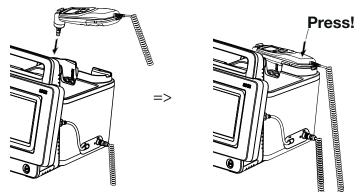

1. Put the connector for the in-ear thermometer in the socket on the SmartBucket until you feel the connector engage.

#### NOTE

The magazine holder in the thermometer compartment provides space for two probe cover magazines.

2. Place the in-ear thermometer in the thermometer compartment as shown in the illustration below.

#### Connecting the seca $SpO_2$ sensor

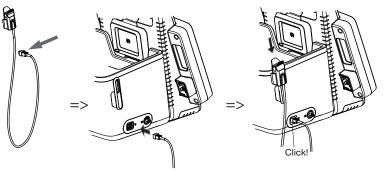

#### NOTICE!

#### Damage to device, malfunction

The  $\mbox{SpO}_2$  sensor must be compatible with the seca  $\mbox{SpO}_2$  measuring equipment fitted.

- Ensure that the SpO₂ sensor is compatible with the SpO₂ measuring equipment fitted in your device → Optional accessories and spare parts.
- ► Follow the user documentation from the sensor manufacturer.
- 1. If necessary, connect a patient cable to the SpO<sub>2</sub> sensor as described in the user documentation from the sensor manufacturer.

2. Put the connector for the SpO<sub>2</sub> sensor/the patient cable in the socket on the SmartBucket until you feel the connector engage.

#### NOTE

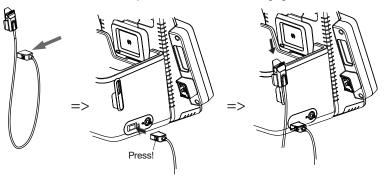

The holder above the  $SpO_2$  connection is for storing the  $SpO_2$  sensor.

#### NOTICE!

#### Damage to device, malfunction

The  $\text{SpO}_2$  sensor must be compatible with the  $\text{SpO}_2$  measuring equipment fitted.

- ► Ensure that the SpO<sub>2</sub> sensor is compatible with the SpO<sub>2</sub> measuring equipment fitted in your device → Optional accessories and spare parts.
- ► Follow the user documentation from the sensor manufacturer.
- 1. If necessary, connect a patient cable to the SpO<sub>2</sub> sensor as described in the user documentation from the sensor manufacturer.
- 2. Put the connector for the SpO<sub>2</sub> sensor/the patient cable in the socket on the SmartBucket until you feel the connector engage.

#### NOTE

The holder above the  $SpO_2$  connection is for storing the  $SpO_2$  sensor.

#### 5.3 Establishing a power supply

- 1. Plug the device connector of the power supply cable into the connecting socket of the device.
- 2. Plug the power supply connector into a power supply socket.

Connecting the Masimo SET® SpO<sub>2</sub> sensor

#### Charging rechargeable battery 5.4

Before starting up the device for the first time, the rechargeable battery for the monitor must be fully charged.

1. Connect the device to the power supply  $\rightarrow$  Establishing a power supply.

2. Press the ON/OFF key of the monitor. The LED of the ON/OFF key is white. The charging process starts.

Current charge status is displayed for approx. 15 seconds:

After approx. 5 minutes, the device switches to standby.

The screen goes off.

The LED of the ON/OFF key flashes green.

When the rechargeable batteries are fully charged, the device switches off.

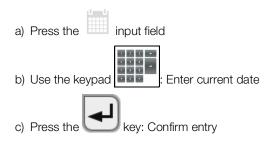

The LED of the ON/OFF key goes off.

#### 5.5 Setting the date and time

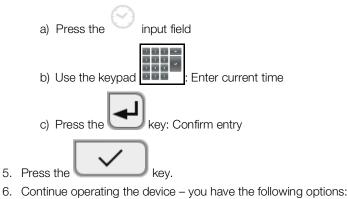

When you start up the device for the first time, you first need to set date and time.

- 1. Connect the device to the power supply.
- 2. Press the ON/OFF key of the monitor. The LED of the key is white. The initial start screen appears.

S	eca .	
	05:59:24	$\odot$
	05.04.2021	
[		$\checkmark$

4. Enter the current time:

- ► Leave device switched on (recommended): → Charging rechargeable battery
- ► Perform measurements using the power supply: → Operation
- Configure device using the power supply: → For administrators: Configuring seca mVSA 535

### 5.6 Initial login

The following user accounts are available on the device initially:

- admin: Configure and manage device
- user: Perform and manage measurements
- service: For authorized service technicians

On initial login, these user accounts must be activated and configured.

Further information is available here:  $\rightarrow$  For administrators: Configuring seca mVSA 535\  $\rightarrow$  User accounts

#### 5.7 Configuration options

The device can only be configured by users with administrator rights. Further information is available here:  $\rightarrow$  For administrators: Configuring seca mVSA 535

### 6. OPERATION

- → Switching the system on/off
- → Managing seca patient files
- → Measuring vital signs
- → Adding weight and height
- → Entering vital signs manually
- → Analyzing measurement

#### 6.1 Switching the system on/off

- → Switching on
- → Logging in
- → Logging out/switching user
- → Saving power/switching off

#### Switching on

 Press the ON/OFF key of the monitor. The LED of the ON/OFF key is white. The device starts up. This takes a few seconds.

The Vital signs tab is displayed.

You have the following options:

- ► Measure vital signs (without patient identification) → Measuring vital signs
- ► Use full functional scope: Log in → Logging in

You must log in to the device if you want to do one of the following:

- Assign vital signs measurement to a seca patient file
- Analyze measured results
- Manage the system

Logging in

### 1. Press the Login key.

The login window is displayed:

		-
	Seca Seca	
	동 이	
2.	Press the input field. The list of user accounts is displayed.	
	NOTE In stand-alone operation, a user account is available for measurir mode → Initial login. No further user accounts can be set up for t area.	
3.	Press your user account.	
	Your user account is displayed in the input field.	
4.	Press the input field.	
5.	Enter your password using the keypad	
~	The Patient tab is displayed.	
о.	Continue with $\rightarrow$ Managing seca patient files.	
•	Press the <b>Logout</b> key.	
	example, weight reduction * 01.08.1961 Vital signs Last measurement: 12.01.2021, 16:01:00	
	NTRD Blood pressure	
	PR Pulse rate 70 1/min	
	SpO <sub>2</sub> Oxygen saturation -	
	TEMP Temperature -	
	Development/growth	

You will be logged out.

The login window is displayed.

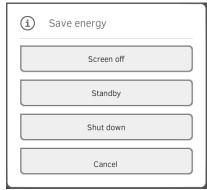

Another user can log in  $\rightarrow$  Logging in.

Logging out/switching user

#### Saving power/switching off

- 1. Briefly press the ON/OFF key of the monitor.
- 2. The Save energy dialog window appears.

3. Select an option in accordance with the table:

#### NOTE

The device automatically switches to standby/shuts down if it is not used for an extended period (phased by idle time)

Idle time key	Device behavior	To remove setting
Screen off	<ul> <li>Display switches off</li> <li>The LED of the ON/OFF key is white.</li> <li>Entries are retained</li> <li>User remains logged in</li> <li>Patient file remains active</li> <li>Measurements continue to run</li> </ul>	Press screen
Standby 10 minutes	<ul> <li>Display switches off.</li> <li>The LED of the ON/OFF key is green</li> <li>Data which have not been saved are lost</li> <li>User is logged out</li> <li>Patient file is deactivated</li> </ul>	Press screen
Shut down 20 minutes	<ul> <li>Power supply operation:</li> <li>When the charging process is complete: Device shuts down and switches off</li> <li>Rechargeable battery operation:</li> <li>Device shuts down</li> <li>The device switches off</li> </ul>	Press the ON/OFF key

#### NOTE

If rechargeable battery charge status undershoots a preset limit value [%], the device shuts down and switches off. It behaves in this way regardless of the option you select in the **Save energy** dialog. The limit value for rechargeable battery charge status is specified by your administrator:  $\rightarrow$  Power management.

# 6.2 Managing seca patient files

- → Creating a seca patient file
- $\rightarrow$  Calling up a seca patient file
- $\rightarrow$  Editing a seca patient file
- → Exporting a seca patient file
- → Deleting a seca patient file
- 1. Log in  $\rightarrow$  Logging in.
- 2. Press the Patient tab. The patient list is displayed.

Patient list		Create patie	ent file		Logo	ut
search				?	≡∫	ζ
Name	- D	ate of birth	~	^	R	$\mathbf{z}$
example, healthy	1	5.11.1977				
example, healthy	2	7.06.1971				-
example, weight reduction	0	1.08.1961				
example, anorexia	2	7.04.1956			$\sim$	^
example, obesity	1	4.02.1967		$\checkmark$	묫	Â
					Ċ	

3. Press the Create patient file key.

Create patient file	×
Anonymous patient	
First name	Date of birth dd.MM.yyyy
Surname	ID
	seca_20211026123737-232
	Save

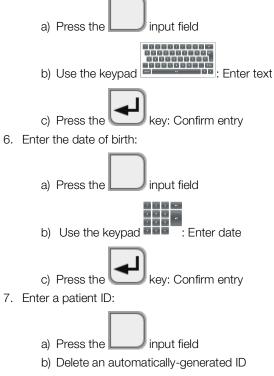

4. Select the option Anonymous patient if desired.

# NOTE

For an anonymous patient, the name is not displayed on the Vital signs and Analysis tabs. Name and measured results are never displayed together.

# Creating a seca patient file

5. Enter the first name and surname of the patient:

c) Enter patient ID

#### NOTE

You only need to assign a specific patient ID if a specific structure is provided for this in your institution. If you do not edit the **ID** input field, the device saves the automatically-generated patient ID.

#### 8. Press the Save key.

The seca patient file has been created and is displayed.

Patient list		Create patie	ent file		Logout
search				9	=
Name	Ŧ	Date of birth	~	^	
example, healthy		15.11.1977			
example, healthy		27.06.1971			
example, weight reduction		01.08.1961			0=
example, anorexia		27.04.1956			$\sim$
example, obesity		14.02.1967		$\checkmark$	 뫇 (1
					<u> </u>

You have the following options for continuing:

- ► Measure vital signs: → Measuring vital signs
- ► Measure vital signs: → Entering vital signs manually

Calling up a seca patient file

- 1. Log in  $\rightarrow$  Logging in.
- 2. Press the Patient tab. The patient list is displayed.

user		Create patient f	ile	Logout
search			9	=
Name	~	Date of birth		
example, healthy		15.11.1977		
example, healthy		27.06.1971		88 88 10 10 10 10 10 10 10 10 10 10 10 10 10

example, anorexia		27.04.1956		$\sim$
example, obesity		14.02.1967	$\sim$	 명 (

- 3. Select a seca patient file:
  - Desired entry not visible: Continue at step 4.
  - Desired entry visible: Continue at step 5.
- 4. Search for the desired seca patient file in the list:

	a) Press the input field
	b) Use the keypad
	c) Press the key: Confirm entry
	A hit list is displayed.
5.	Press the desired entry. The selected seca patient file appears in the <b>Patient information</b> dialog field.
6.	Press the <b>Confirm</b> key. The seca patient file is opened.

You have the following options for continuing:

- ► Measure vital signs: → Measuring vital signs
- 1. Call up a seca patient file  $\rightarrow$  Calling up a seca patient file.

- 2. Press the 🕑 key
- 3. Edit the entries.
- 4. Press the **Save** key. The changes are saved.

Editing a seca patient file

# Exporting a seca patient file

- 1. Connect a USB memory stick to the monitor.
- 2. Call up a seca patient file  $\rightarrow$  Calling up a seca patient file.

- A confirmation dialog opens.
- 4. Press the **Confirm** key. The patient file is exported to the USB memory stick.

Deleting a seca patient file

1. Call up a seca patient file  $\rightarrow$  Calling up a seca patient file.

- A confirmation dialog opens.
- 3. Press the **Delete** key. The patient file is deleted.

# 6.3 Measuring vital signs

- → Introduction
- → Measuring blood pressure
- → Measuring temperature, oral/axillary (COVIDIEN<sup>TM</sup> FILAC<sup>TM</sup> 3000, blue)
- → Measuring temperature, rectal (COVIDIEN<sup>TM</sup> FILAC<sup>TM</sup> 3000 red)
- → Measuring in-ear temperature (COVIDIEN<sup>TM</sup> GENIUS<sup>®</sup>3)
- → Reading off pulse rate
- → Measuring oxygen saturation (SpO<sub>2</sub>)
- → Adding a comment
- → Stopping a measurement
- → Assigning anonymous measurement to a seca patient file

The Vital signs measurement function is available after the device is switched on. You can perform measurements without login and without patient identification.

If you want to assign the measurement to a patient file, we recommend calling up  $\rightarrow$  Calling up a seca patient file or creating  $\rightarrow$  Creating a seca patient file a patient file **before** the measurement. This applies in particular when repeat measurements for a patient are likely.

You can measure one or more vital signs in one measurement procedure. Measurement starts automatically after the measuring accessories have been attached to the patient (exception: blood pressure measurement and in-ear temperature measurement). Depending on device configuration, pulse rate is determined using either oxygen saturation or blood pressure.

Alternatively, a patient's vital signs can also be entered manually  $\rightarrow$  Entering vital signs manually.

Weight and height can be recorded by compatible seca measuring devices or entered manually:  $\rightarrow$  Adding weight and height.

Introduction

#### Measuring blood pressure

- → Preparing the blood pressure measurement
- $\rightarrow$  Starting a single measurement
- → Performing a multiple measurement
- → Modifying presets

- Do not use luer lock adapter on the blood pressure measurement tubes. The use of luer lock adapters can lead to accidental connec-tion of the blood pressure tubes to intravenous lines and thus lead to an infusion of air into the bloodstream of the patient.
- The decision to use this device with pregnant or preclamptic patients is the responsibility of the user.
- The device has **no** alarm function. Never leave the patient unobserved during a measurement.
- Frequent measurements may lead to perfusion disorders and consequently to severe harm to the patient.
- Route the compressed air tube so that it cannot kink. A kinked compressed air tube leads to sustained cuff pressure. This may lead to perfusion disorders and consequently to severe harm to the patient.
- Do not place the blood pressure cuff over open wounds. This may lead to further harm to the patient.
- Do not apply any external pressure onto the blood pressure measurement tubes or onto the blood pressure cuff.
- For patients with moderate to severe cardiac arrhythmias, inaccurate measurements may result with the blood pressure measurement.
- ► The following factors may affect the measurement result:
  - Measuring location (e.g. altitude)
  - Patient position (standing, sitting, lying)
  - Physiological state of the patient (e.g. exertion, movement, shaking, shivering)
  - Patient's age
  - Arteriosclerosis
  - Poor perfusion
  - Diabetes
  - Kidney disease
  - If the measurements seem implausible, check and evaluate the vital signs of the patient using alternative means. Then check the measurement function of the device with the help of the section "Troubleshooting".

### WARNING!

#### **Patient hazard, incorrect measurement**

- Do not place the blood pressure cuff on the arm on the side on which a mastectomy or lymph node removal has been performed.
- Apply the blood pressure cuffs so that the blood circulation of the patient is not compromised.
- Do not apply the blood pressure cuffs on spots that have weak circulation or on extremities on which intravenous routes lie.
- High cuff pressures may be unpleasant for sensitive patients. Keep the patient's general condition under observation during the measurement.

17-10-05-395-002\_12-2021B

- Inflating the blood pressure cuff may lead to occasional malfunctions of other medical electrical devices used on the same limb.
- Use only blood pressure cuffs from seca.
- Before every measurement, ensure that the blood pressure mea-► surement tubes and connections are free of damage and airtight.
- Ensure that the arm on which the blood pressure cuff is attached does not move during the measurement.
- Ensure that the blood pressure cuff is applied according to the ► printed mark "Artery".

# Incorrect measurement

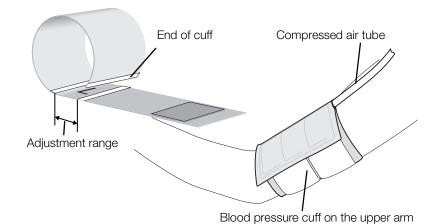

If the blood pressure cuff is too mall, the measured blood pressure values will be too high. If the blood pressure cuff is too large, the measured blood pressure values will be too small.

Always use a blood pressure cuff that is the correct size.

#### Preparing the blood pressure measurement

1. Ensure that the patient adopts the following position:

- Sitting comfortably
- Legs not crossed
- Feet flat on the floor
- Back and arm supported
- 2. Apply the blood pressure cuff to the patient's non-dominant arm as shown in the illustration below:
  - a) Note the labeling on the blood pressure cuff → Markings on the blood pressure cuff
  - b) Use correct size of blood pressure cuff: End of cuff inside the adjustment range when put on
  - c) Position the blood pressure cuff at the level of the right atrium
  - d) Ensure correct fit of the blood pressure cuff
  - e) Route compressed air tube so that it cannot kink

17-10-05-395-002\_12-2021B

#### NOTE

Get the patient to sit quietly for 5 minutes before recording measured values. The patient should remain relaxed and not talk during the measurement.

You have the following options for continuing:

- ► → Starting a single measurement
- ► → Performing a multiple measurement

#### NOTE

Your administrator will specify whether Single measurement or Multiple measurement is available when the device starts up. You can modify this and other presets for the current measurement: → Modifying presets. After this, the settings specified by the administrator will be active again.

#### Starting a single measurement

Press the key on the monitor. Blood pressure measurement starts:

Current cuff pressure is displayed.

The symbols for measurement method and measuring mode flash (here: Single measurement, upward measurement).

Measurement stops automatically as soon as valid blood pressure values are detected.

The values for systolic/diastolic blood pressure **SYS/DIA** and mean arterial pressure **MAP** are displayed.

You have the following options for continuing:

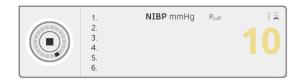

- Measure more vital signs  $\rightarrow$  Measuring vital signs
- ► Stop the measurement → Stopping a measurement

#### NOTE

- Using the Start key, you can cancel and restart a blood pressure measurement at any time.
- If upward measurement fails to deliver a measured value, the device automatically switches to downward measurement. If necessary, the device re-pumps several times during the downward measurement (re-pumping: Increasing cuff pressure by approx. 50 mmHg followed by incremental releasing of that pressure). If no measured value is delivered even after several re-pumping steps, the procedure is canceled.

#### Performing a multiple measurement

 Press the key on the monitor. The first part-measurement starts (here: 6 part-measurements).

Current cuff pressure is displayed.

The symbols for measurement method and measuring mode flash (here: Upward measurement).

The part-measurement stops automatically as soon as valid blood pressure values are detected.

The values for systolic/diastolic blood pressure **SYS/DIA** and mean arterial pressure **MAP** are displayed.

The waiting time until the next part-measurement starts.

The next part-measurement starts automatically.

Once all part-measurements are present, mean blood pressure (mean value) is displayed.

Disregarded part-measurements are displayed struck through (here: Measurement 1).

- 2. Edit the list of part-measurements to be taken into account:
  - Press the list of part-measurements
  - Put a tick against the part-measurements to be used for calculating the mean (example:)

1	-	4	-
2	✓	5	-
3	✓	6	<ul> <li></li> </ul>

#### Click Confirm

Average blood pressure is displayed.

You have the following options for continuing:

- ► Measure more vital signs → Measuring vital signs
- ► Stop the measurement → Stopping a measurement

#### NOTE

• Use the Start key to interrupt and continue the mean measurement or to cancel and re-start it.

- If upward measurement does not deliver a measured value, the device automatically switches to downward measurement.
- If necessary, the device re-pumps several times during the downward measurement (re-pumping: Increasing cuff pressure by approx. 50 mmHg followed by incremental releasing of that pressure). If no measured value is delivered even after several re-pumping steps, the procedure is canceled.

#### Modifying presets

#### NOTE

Your settings apply only to the current measurement procedure. If you stop the measurement  $\rightarrow$  Stopping a measurement, the presets defined by the administrator become active again.

- 1. Ensure that the blood pressure cuff is not applied.
- 2. Press the **NIBP** field.

The **NIBP settings** dialog window opens. The presets are displayed.

NIBP settings	
Type ● 斋 Inflation	O ≚ Deflation
Starting pressure	
180 mmHg 👻	·
• Single measurement	Multiple measurement
Cancel	Confirm

- 3. Press the desired measurement method.
  - Upward measurement, continue at step 5.
  - Downward measurement, continue at step 4.
- 4. Adapt initial pressure if necessary.
- 5. Press the desired measuring sequence.
  - Single measurement
  - Multiple measurement or if a measuring profile has been configured for the multiple measurement name of the measuring profile

#### NOTE

If you have questions about configuring the multiple measurement, contact your administrator.

6. Press the **Confirm** key.

The dialog window closes. Changed settings are adopted for the current measurement.

 Start the blood pressure measurement as described in the section entitled → Preparing the blood pressure measurement. Measuring temperature, oral/ axillary (COVIDIEN™ FILAC™ 3000, blue)

- → Starting an oral/axillary temperature measurement
- → Modifying presets

- The decision to use this device with children, pregnant or lactating patients is the responsibility of the user.
- Before every measurement, ensure that the measurement mode and the measuring method have been correctly selected.
- For each temperature measurement, use a new probe cover to reduce the risk of cross-contamination, nosocomial infections and inplausible measurements.
- Only use probe covers that are approved for the thermometer being used.
- Always use the probe cover directly with the thermometer from the cover box on the device.
- ► Ensure that the probe covers engage correctly on the thermometer.
- Probe covers are only intended for an individual measurement, they are not reusable and not sterile. Do not disinfect or sterilize the probe covers. Dispose of the according to national regulations and the regulations of your institute.
- Only use properly functioning thermometers. If you find damage, do not use the thermometer. Use a suitable replacement.
- When not in use, store the thermometer in the corresponding holder on the machine.
- If the measurements seem implausible, check and evaluate the vital signs of the patient using alternative means. Then check the measurement function of the device with the help of the section "Troubleshooting".

# WARNING!

# Patient hazard, incorrect measurement

- Ensure that in "Direct" measuring mode, oral temperature measurements do not last longer than 3 minutes and axillary measurements do not last longer than 5 minutes.
- Only perform oral/axillary measurement with devices that are equipped with a blue temperature probe and a blue probe holder.
- ► For devices with COVIDIEN<sup>TM</sup> FILAC<sup>TM</sup> 3000 measurement equipment, only use COVIDIEN<sup>TM</sup> temperature probes and probe covers.
- For axillary temperature measurements, ensure that the temperature probe, with probe cover, makes direct contact with the skin of the patient and does not come into contact with clothing or other objects.

#### Starting an oral/axillary temperature measurement

- 1. Remove the temperature probe (blue) from the probe holder (blue).
- 2. Pick up a probe cover:

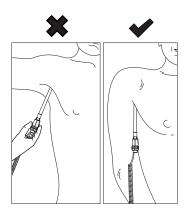

- a) Insert the probe in a probe cover in the pack
- b) Allow the probe cover to engage audibly with the probe
- c) Remove probe and probe cover from the pack
- d) Ensure that the probe cover is undamaged
- 3. Position the temperature probe as shown in the illustration:

Oral measurement:

Axillary measurement:

Measurement starts automatically.

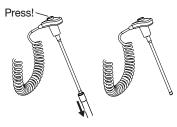

The measured value and the symbol for the measurement method (here: Predictive) flash until a valid measured value is obtained.

The temperature value is displayed until you stop the measurement. → Stopping a measurement.

4. Discard the probe cover and dispose of it in line with your institution's policy.

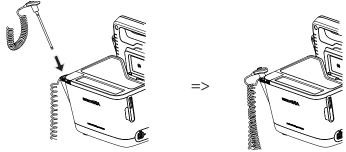

17-10-05-395-002\_12-2021B

#### NOTE

You can only perform a further temperature measurement if you discard the probe cover and push the temperature probe back into the probe holder completely.

5. Push the temperature probe into the probe holder completely.

You have the following options for continuing:

- ► Measure further vital signs → Measuring vital signs
- ► Stop the measurement → Stopping a measurement

#### Modifying presets

#### NOTE

Your settings apply to the current measurement procedure. If you stop the measurement  $\rightarrow$  Stopping a measurement, the presets defined by the administrator become active again.

- 1. Ensure that the temperature probe is pushed into the probe holder completely.
- 2. Press the **TEMP** field.

The **Temperature settings** dialog window opens. The presets are displayed.

<b>()</b> T	emperature settings
•	Predictive
0	Direct
•	Oral
•	Axillary
С	ancel Confirm

- 3. Press the desired measurement method.
  - Predictive
  - Direct
- 4. Press the desired measuring position.
  - Oral
  - Axillary

# 5. Press the **Confirm** key.

The dialog window closes.

Changed settings are adopted for the current measurement.

6. Perform a temperature measurement as described in the section entitled
 → Starting an oral/axillary temperature measurement.

#### Measuring temperature, rectal (COVIDIEN™ FILAC™ 3000 red)

- → Starting a rectal temperature measurement
- → Modifying presets

#### WARNING! Patient hazard, incorrect measurement

- The decision to use this device with children, pregnant or lactating patients is the responsibility of the user.
- Before every measurement, ensure that the measurement mode and the measuring method have been correctly selected.
- For each temperature measurement, use a new probe cover to reduce the risk of cross-contamination, nosocomial infections and inplausible measurements.
- Only use probe covers that are approved for the thermometer being used.
- Always use the probe cover directly with the thermometer from the cover box on the device.
- ► Ensure that the probe covers engage correctly on the thermometer.
- Probe covers are only intended for an individual measurement, they are not reusable and not sterile. Do not disinfect or sterilize the probe covers. Dispose of the according to national regulations and the regulations of your institute.
- Only use properly functioning thermometers. If you find damage, do not use the thermometer. Use a suitable replacement.
- When not in use, store the thermometer in the corresponding holder on the machine.
- If the measurements seem implausible, check and evaluate the vital signs of the patient using alternative means. Then check the measurement function of the device with the help of the section "Troubleshooting".

# WARNING!

# Patient hazard, incorrect measurement

- Ensure that rectal temperature measurements in "Direct" measuring mode do not last longer than 5 minutes.
- Only perform rectal measurement with devices that are equipped with a red temperature probe and a red probe holder.
- ► For devices with COVIDIEN<sup>TM</sup> FILAC<sup>TM</sup> 3000 measurement equipment, only use COVIDIEN<sup>TM</sup> temperature probes and probe covers.
- For rectal temperature measurement use some lubricant on the temperature probe. Too much lubricant can distort the measurement result.
- For rectal temperature measurements, do not insert the temperature probes deeper than about 19 mm (3/4 inch) for adults and about 13 mm (1/2 inch) for children.

#### Starting a rectal temperature measurement

- 1. Remove the temperature probe (red) from the probe holder (red).
- 2. Pick up a probe cover:

- a) Insert the probe in a probe cover in the pack
- b) Allow the probe cover to engage audibly with the probe
- c) Remove probe and probe cover from the pack
- d) Ensure that the probe cover is undamaged
- 3. Apply a little lubricant.
- 4. Guide the temperature probe into the patient's rectum:
  - ► For adults: 12 19 mm
  - ► For children: 6 13 mm

Measurement starts automatically.

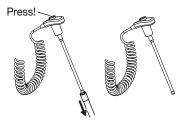

The symbol for the measurement method (here: Predictive) flashes until a valid measured value is obtained.

The temperature value is displayed until you stop the measurement. → Stopping a measurement.

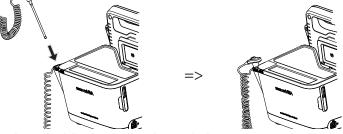

5. Discard the probe cover and dispose of it in line with your institution's policy.

#### NOTE

You can only perform a further temperature measurement if you discard the probe cover and push the temperature probe back into the probe holder completely. 6. Push the temperature probe into the probe holder completely.

You have the following options for continuing:

- ► Measure further vital signs → Measuring vital signs
- ► Stop the measurement → Stopping a measurement

#### Modifying presets

#### NOTE

Your settings apply to the current measurement procedure. If you stop the measurement  $\rightarrow$  Stopping a measurement, the presets defined by the administrator become active again.

- 1. Ensure that the temperature probe is pushed into the probe holder completely.
- 2. Press the **TEMP** field.

The **Temperature settings** dialog window opens.

The presets are displayed.

(	• Temperature settings
	● ₩ Predictive
	O 🌡 Direct
	Cancel Confirm

- 3. Press the desired measurement method.
  - Predictive
  - Direct
- 4. Press the **Confirm** key.

The dialog window closes.

The modified settings are adopted.

Start the temperature measurement as described in the section entitled
 → Starting a rectal temperature measurement.

#### Measuring in-ear temperature (COVIDIEN™ GENIUS®3)

#### DANGER! Patient hazard

Choking on probe covers can lead to serious injury.

# WARNING!

#### Patient hazard, incorrect measurement

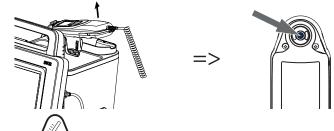

- The decision to use this device with children, pregnant or lactating patients is the responsibility of the user.
- Before every measurement, ensure that the measurement mode and the measuring method have been correctly selected.
- For each temperature measurement, use a new probe cover to reduce the risk of cross-contamination, nosocomial infections and inplausible measurements.
- Only use probe covers that are approved for the thermometer being used.
- Always use the probe cover directly with the thermometer from the cover box on the device.
- Ensure that the probe covers engage correctly on the thermometer.
- Probe covers are only intended for an individual measurement, they are not reusable and not sterile. Do not disinfect or sterilize the probe covers. Dispose of the according to national regulations and the regulations of your institute.
- Only use properly functioning thermometers. If you find damage, do not use the thermometer. Use a suitable replacement.
- When not in use, store the thermometer in the corresponding holder on the machine.
- If the measurements seem implausible, check and evaluate the vital signs of the patient using alternative means. Then check the measurement function of the device with the help of the section "Troubleshooting".

#### WARNING! Patient hazard, incorrect measurement

- If the thermometer is not placed in the auditory canal correctly, this may lead to permanent injury.
- Do not use the in-ear thermometer if the patient's auditory canal is blocked with blood, cerebrospinal fluid or other discharge.
- Do not use the in-ear thermometer if the patient's auditory canal is blocked with wax or a foreign body.
- Grommets or tympanostomy tubes have no negative impact on measuring accuracy. To prevent problems for the patient, do not resume in-ear temperature measurement any sooner than one week after an operation.
- Only use probe covers intended for your in-ear thermometer. Other probe covers may falsify the measuring results.
- ► Ensure that the probe tip seals the auditory canal. If this is not the case, measuring results will be falsified.
- Severe scarring of the eardrum may falsify the measurement, resulting in values which are too low being measured.

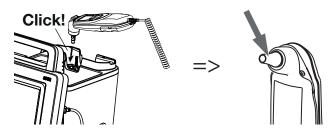

# CAUTION! Incorrect measurement

- Once there is a probe cover on the thermometer, do not point the probe tip at objects which generate heat – such as hands, computers or windows. This will lead to falsified measuring results.
- Use a new probe cover for every temperature measurement. The surface of the probe cover must be smooth, with no holes, cracks or creases.
- Using the thermometer without a probe cover will lead to falsified measuring results.
- Ensure that the measuring window of the ear thermometer is clean, dry and undamaged. Contamination, for example fingerprints, ear wax or dust will impair the transparency of the measuring window with the result that low values will be measured.
- Patients who wear removable hearing aids should remove them from the ear at least 10 minutes before the measurement. Implants do not generally have any effect on in-ear temperature.
- At low outdoor temperatures, the patient should wait at room temperature for a while before the measurement so as not to falsify the measuring results.
- If the thermometer has been stored outside the ambient temperature range quoted in the "Technical data" section, wait at least 30 minutes before using it until the thermometer has adapted to room temperature.
- Ear drops or other medications applied to the ear can falsify the measuring results. If possible, take the measurement on the other, non-treated ear.
- Temperature measurements on the left or right ear can lead to different results. Always perform follow-up measurements on the same ear.
- Wait at least two minutes before performing a follow-up measurement on the same ear.
- 1. Take the in-ear thermometer out of the SmartBucket.
- 2. Make sure that the lens of the measuring head is clean.

3. Press the *key* to switch on the in-ear thermometer.

- 4. Pick up a probe cover:
  - a) Push the measuring head firmly into a probe cover in the magazine
  - b) Ensure that the probe cover engages audibly with the measuring head
  - c) Remove the probe cover and thermometer from the magazine
  - d) Ensure that the probe cover is undamaged

The system is ready to measure when the displays of both the monitor and the in-ear thermometer are showing dashes, the current measuring position and the thermometer icon as shown in the illustration below.

5. Introduce the measuring head into the patient's auditory canal as shown in the illustration.

6. Measure the patient's temperature:

- b) Wait until you hear a triple acoustic signal
- c) Take the measuring head out of the patient's ear

The monitor displays the temperature value.

The in-ear thermometer display likewise shows the temperature value and the Discard probe cover symbol.

The temperature value is displayed on the monitor until you stop the measurement  $\rightarrow$  Stopping a measurement.

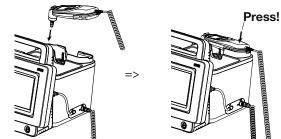

#### NOTE

The monitor always displays measured values in the unit set on the monitor. If required, the values submitted by the in-ear thermometer are converted automatically.

7. Press the  $\bigcirc$  key to discard the probe cover.

- 8. Dispose of the probe cover in line with your institution's policy.
- 9. Press the in-ear thermometer into the SmartBucket holder until you feel it engage.

You have the following options for continuing:

- ► Measure further vital signs → Measuring vital signs
- ► Stop the measurement → Stopping a measurement

Reading off pulse rate

→ Interrogating pulse rate source

→ Modifying presets (seca measuring equipment only)

#### Patient hazard, incorrect measurement

A pulse rate determined on the basis of blood pressure or oxygen saturation is susceptible to artifacts.

 To obtain an exact value, determine pulse rate by means of ECG or palpation.

Depending on device configuration, pulse rate is determined on the basis of blood pressure or oxygen saturation.

Pulse rate is displayed until you stop the measurement  $\rightarrow$  Stopping a measurement.

#### Interrogating pulse rate source

 Press the **PR** field. The **PR settings** dialog window opens. The source of the pulse rate (NIBP or SpO<sub>2</sub>) is displayed.

2. Press the **Confirm** key. The dialog window closes.

#### Modifying presets (seca measuring equipment only)

# NOTE

These settings apply to the current measurement procedure. If you stop the measurement  $\rightarrow$  Stopping a measurement, the presets defined by the administrator become active again.

- 1. Ensure that neither the blood pressure cuff nor the SpO<sub>2</sub> sensor are applied.
- 2. Press the PR field.

The **PR settings** dialog window opens.

The preset is displayed (here: Default).

O PR
Source: SpO <sub>2</sub>
Standard
O ≑♥ Sensitive
Cancel Confirm

3. Press the desired measuring mode:

S	eca measuring equipme	ent
Mode	Measuring range	Motion tolerance
Default	0 - 240 min <sup>-1</sup>	High
Sensitive	20 - 300 min <sup>-1</sup>	Low

#### 4. Press the **Confirm** key.

The dialog window closes. Changed settings are adopted for the current measurement.

 Start a blood pressure measurement or an SpO<sub>2</sub> measurement as described in the sections entitled → Preparing the blood pressure measurement and → Starting an SpO<sub>2</sub> measurement.

- → Starting an SpO<sub>2</sub> measurement
- → Modifying presets

# Patient hazard, incorrect measurement

- The device has no alarm function. Never leave the patient unobserved during a measurement.
- The pulse oximeter is not an apnea monitoring device.
- The pulse oximeter must not be used to analyze arrhythmia.
- Incorrectly-applied sensors may lead to injuries at the point of application. Follow the Instructions for Use from the sensor manufacturer.
- Apply the blood pressure cuff and SpO<sub>2</sub> sensor to different extremities to avoid falsifying measuring results.
- ► Apply the intravenous pressure catheter and SpO<sub>2</sub> sensor to different extremities to avoid falsifying measuring results.
- ► Red and infrared light at fixed wavelengths is used for SpO<sub>2</sub> measurement. These wavelengths can affect other optical applications. Information about the wavelengths used can be found in the Instructions for Use for the sensor used.
- ► As with all medical equipment, carefully route patient cabling to reduce the possibility of patient entanglement or strangulation.
- Do not place the pulse oximeter or accessories in any position that might cause it to fall on the patient.
- Do not start or operate the pulse oximeter unless the setup was verified to be correct.
- Do not use the pulse oximeter during magnetic resonance imaging (MRI) or in an MRI environment.
- Do not use the pulse oximeter if it appears or is suspected to be damaged.
- Explosion hazard: Do not use the pulse oximeter in the presence of flammable anesthetics or other flammable substance in combination with air, oxygen-enriched environments, or nitrous oxide.
- To ensure safety, avoid stacking multiple devices or placing anything on the device during operation.
- To protect against injury, follow the directions below:
  - Avoid placing the device on surfaces with visible liquid spills.
  - Do not soak or immerse the device in liquids.
  - Do not attempt to sterilize the device.
  - Use cleaning solutions only as instructed in this instructions for use.
  - Do not attempt to clean the device while monitoring a patient.
- To protect from electric shock, always remove the sensor and completely disconnect the pulse oximeter before bathing the patient.
- If any measurement seems questionable, first check the patient's vital signs by alternate means and then check the pulse oximeter for proper functioning. Follow the section entitled "Troubleshooting".
- Inaccurate SpO2 readings may be caused by the following ► conditions:
  - Improper sensor application and placement
  - Elevated levels of COHb or MetHb: High levels of COHb or MetHb may occur with a seemingly normal SpO2. When elevated levels of COHb or MetHb are suspected, laboratory analysis (CO-Oximetry) of a blood sample should be performed.
  - Elevated levels of bilirubin
  - Elevated levels of dyshemoglobin

- Vasospastic disease, such as Raynaud's, and peripheral vascular disease
- Hemoglobinopathies and synthesis disorders such as
- thalassemias, Hb s, Hb c, sickle cell, etc. – Hypocapnic or hypercapnic conditions
- Hypocaphic or hypercaphic cond
   Severe apamia
- Severe anemiaVery low arterial perfusion
- Extreme motion artifact
- Abnormal venous pulsation or venous constriction
- Severe vasoconstriction or hypothermia
- Arterial catheters and intra-aortic balloon
- Intravascular dyes, such as indocyanine green or methylene blue
- Externally applied coloring and texture, such as nail polish, acrylic nails, glitter, etc.
- Birthmark(s), tattoos, skin discolorations, moisture on skin, deformed or abnormal fingers. etc.
- Skin color disorders
- Interfering substances: Dyes or any substance containing dyes that change usual blood pigmentation may cause erroneous readings.
- The pulse oximeter should not be used as the sole basis for medical decisions. It must be used in conjunction with clinical signs and symptoms.
- SpO<sub>2</sub> is empirically calibrated in healthy adult volunteers with normal levels of carboxyhemoglobin (COHb) and methemoglobin (MetHb).
- Do not adjust, repair, open, disassemble, or modify the pulse oximeter or accessories. Injury to personnel or equipment damage could occur. Return the pulse oximeter for servicing if necessary.

# 

# Patient hazard, damage to device

- ► For devices equipped with Masimo SET<sup>®</sup> SpO<sub>2</sub> measurement equipment, only use Masimo sensors and patient cables.
- For devices equipped with seca SpO<sub>2</sub> measurement equipment, only use seca sensors and patient cables.

## CAUTION! Patient hazard, incorrect measurement

- Do not use damaged sensors or damaged patient cables, for example with exposed optics.
- Do not place the pulse oximeter where the controls can be changed by the patient.
- Electrical shock and flammability hazard: Before cleaning, always turn off the device and disconnect from any power source.
- When patients are undergoing photodynamic therapy they may be sensitive to light sources. Pulse oximetry may be used only under careful clinical supervision for short time periods to minimize interference with photodynamic therapy.
- Do not place the pulse oximeter on electrical equipment that may affect the device, preventing it from working properly.
- If SpO<sub>2</sub> values indicate hypoxemia, a laboratory blood sample should be taken to confirm the patient's condition.
- If the Low Perfusion or Low Signal Quality message is frequently displayed, find a better perfused monitoring site. In the interim, assess the patient and, if indicated, verify oxygenation status through other means.
- Change the application site or replace the sensor and/or patient cable when a "Replace sensor" and/or "Replace patient cable", or a persistent poor signal quality message (such as "Low SIQ") is displayed on the host monitor. These messages may indicate that patient monitoring time is exhausted on the patient cable or sensor.
- If using pulse oximetry during full body irradiation, keep the sensor out of the radiation field. If the sensor is exposed to the radiation, the reading might be inaccurate or the device might read zero for the duration of the active irradiation period.
- Variation in measurements may be profound and may be affected by sampling technique as well as the patient's physiological conditions. Any results exhibiting inconsistency with the patient's clinical status should be repeated and/or supplemented with additional test data. Blood samples should be analyzed by laboratory instruments prior to clinical decision making to completely understand the patient's condition.
- Do not submerge the pulse oximeter in any cleaning solution or attempt to sterilize by autoclave, irradiation, steam, gas, ethylene oxide or any other method. This will seriously damage the pulse oximeter.
- Electrical Shock Hazard: Carry out periodic tests to verify that leakage currents of patient-applied circuits and the system are within acceptable limits as specified by the applicable safety standards. The summation of leakage currents must be checked and in compliance with IEC 60601-1 and UL60601-1. The system leakage current must be checked when connecting external equipment to the system. When an event such as a component drop of approximately 1 meter or greater or a spillage of blood or other liquids occurs, retest before further use. Injury to personnel could occur.
- To minimize radio interference, other electrical equipment that emits radio frequency transmissions should not be in close proximity to the pulse oximeter.
- Replace the cable or sensor when a replace sensor or when a low SIQ message is consistently displayed while monitoring consecutive patients after completing troubleshooting steps listed in this manual.

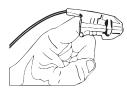

#### NOTE:

• A functional tester cannot be used to assess the accuracy of the pulse oximeter.

- High-intensity extreme lights (such as pulsating strobe lights) directed on the sensor, may not allow the pulse oximeter to obtain vital sign readings.
- When using the Maximum Sensitivity setting, performance of the "Sensor Off" detection may be compromised. If the device is in this setting and the sensor becomes dislodged from the patient, the potential for false readings may occur due to environmental "noise" such as light, vibration, and excessive air movement.
- Do not loop the patient cabling into a tight coil or wrap around the device, as this can damage the patient cabling.
- Additional information specific to the Masimo sensors compatible with the pulse oximeter, including information about parameter/ measurement performance during motion and low perfusion, may be found in the sensor's directions for use (DFU).
- Cables and sensors are provided with X-Cal<sup>TM</sup> technology to minimize the risk of inaccurate readings and unanticipated loss of patient monitoring. Refer to the Cable or Sensor DFU for the specified duration of the patient monitoring time.

#### Starting an SpO<sub>2</sub> measurement

- Apply the SpO<sub>2</sub> sensor according to the sensor manufacturer's instructions for use.
  - a) Ensure that the SpO<sub>2</sub> sensor is the correct size
  - b) Prepare measuring point (e.g. remove jewelry or nail varnish)
  - c) Apply the SpO<sub>2</sub> sensor to the measurement point (here: Soft clip sensor)

Measurement starts automatically.

The symbol for the measurement method flashes (here: Normal) until a valid measured value is obtained.

The SpO<sub>2</sub> value is displayed.

You have the following options for continuing:

- ► Measure more vital signs → Measuring vital signs
- ► Stop the measurement → Stopping a measurement

#### NOTE

If your device is equipped with Masimo SET<sup>®</sup> pulse oximetry, perfusion index (PI) is displayed in addition to oxygen saturation. This helps you assess perfusion at the measurement point and to find a better measurement point if necessary.

#### **Modifying presets**

# NOTE

Your settings apply to the current measurement procedure. If you stop the measurement  $\rightarrow$  Stopping a measurement, the presets defined by the administrator become active again.

1. Ensure that no  $SpO_2$  sensor has been applied to the patient.

#### 2. Press the $\mathbf{SpO}_2$ field.

The **SpO**<sub>2</sub> settings dialog window opens.

The presets are displayed (here: Masimo SET® pulse oximetry).

SpO <sub>2</sub>	
O 盇 Stable	
🖲 🥿 Normal	
O At Sensitive	
Cancel	Confirm

3. Press the desired sensitivity:

Masimo SET <sup>®</sup> SpO <sub>2</sub> module			
Mode	Indication		
Normal	<ul> <li>Normal perfusion</li> </ul>		
Normai	<ul> <li>Mild perfusion disorders</li> </ul>		
Adaptive Probe Off Detection (APOD)	Vigorous patient movements		
	<ul> <li>Poor perfusion</li> </ul>		
Maximum	<ul> <li>Severely disrupted signal, for</li> </ul>		
	example due to indoor lighting or		
	direct sunlight		

seca $SpO_2$ module		
Mode	Motion tolerance	
Stable	High	
Normal	Normal	
Sensitive	Low	

4. Press the **Confirm** key.

The dialog window closes.

The changed settings are used for the current measurement.

Start the SpO₂ measurement as described in the section entitled
 → Starting an SpO₂ measurement.

The device provides several options for adding the parameters weight and height. Your administrator specifies which of the options you can use. Further information is available here:  $\rightarrow$  Adding weight and height.

In stand-alone mode, you have the option of adding a comment to every measurement.

- 2. Enter the comment.
- 3. → Stopping a measurement

# 17-10-05-395-002\_12-2021B

Weight and height

Adding a comment

## Stopping a measurement

Assigning anonymous

measurement to a seca patient file

Stop the current measurement before you start a new one.

You have the following options:

- Press the key: Save measurement
- ► Assign anonymous measurement to a seca patient file: → Assigning anonymous measurement to a seca patient file
- Press the key: Discard measurement

To assign an anonymous measurement to a patient file, proceed as follows:

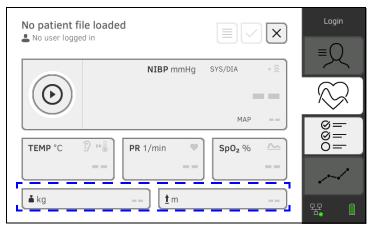

- 1. Log in  $\rightarrow$  Logging in.
- Press the Patient tab.
   You have the following options for continuing
  - $\rightarrow$  Calling up a seca patient file
  - $\rightarrow$  Creating a seca patient file
- 3. Confirm the **Assign measurement?** message. The measurement is assigned to the patient file.

The measurement is saved.

- → Receiving weight and height (seca 360° proximity)
- → Entering weight and height manually

You can add the parameters weight and height in the Patient tab:

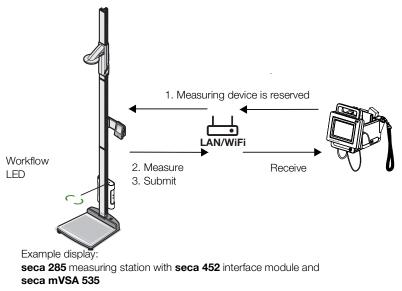

Your administrator can set up the device so that weight and height can be received by compatible seca measuring devices:

#### ightarrow ightarrow m Receiving weight and height (seca 360° proximity)

You can also enter weight and height manually:  $\rightarrow$  Entering weight and height manually.

Receiving weight and height (seca 360° proximity)

If a corresponding network connection is set up, weight and height can be submitted from a seca measuring device via LAN or WiFi.

If you have not yet done so, call up a patient file: → Calling up a seca patient file.

The measuring device preset by your administrator is reserved automatically.

The Workflow LED on the preset measuring device is green.

- 2. Measure the patient as described in the instructions for use for the measuring device.
- 3. Submit the measured values as described in the instructions for use for the measuring device.

The values appear on **seca mVSA 535** in the Weight and Height fields (here: Vital signs tab):

You have the following options for continuing:

- ► Measure more vital signs → Measuring vital signs
- ► Stop the measurement → Stopping a measurement

You can enter weight and height manually or adopt the values from the previous measurement.

- 1. Press the Patient tab.
- 2. If you have not yet done so, select a patient file.
- 3. Press the Vital signs tab.
- 4. Press the Weight or Height field.

A numerical keypad appears (here: Weight):

You have the following options for entering a value:

 Press the key: Adopt the value from the previous measurement of patient

- 5. Press the 🛃 key.
  - The values appear in the Weight and Height fields:

▲ kg 83.60 t m 1.850 Vital signs tab

You have the following options for continuing:

- ► Measure more vital signs → Measuring vital signs
- ► Stop the measurement → Stopping a measurement

# Entering weight and height manually

# 6.5 Entering vital signs manually

- → Entering blood pressure manually
- → Entering temperature manually
- → Entering pulse rate manually
- → Entering oxygen saturation manually

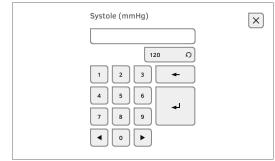

# Entering blood pressure manually

#### NOTE

- Follow the safety precautions in the instructions for use for your blood pressure measuring device.
- 1. Measure blood pressure as described in the instructions for use for your blood pressure measuring device.
- 2. Call up a patient file  $\rightarrow$  Calling up a seca patient file.
- 3. In the Vital signs tab, keep the **NIBP** field depressed for at least three seconds:

	NIBP mmHg	SYS/DIA	• <<
$(\mathbf{O})$			
		MAP	

A numerical keypad for inputting systolic BP appears:

- 4. Enter the measured value for systolic BP:
  - a) Enter the value

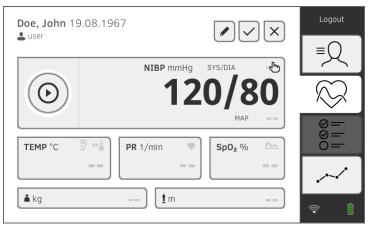

A numerical keypad for inputting diastolic BP appears.

Di	Diastole (mmHg)	
	4 5 6	
	7 8 9	

- 5. Enter the measured value for diastolic BP:
  - a) Enter the value

The values entered appear in the **NIBP** field of the Vital signs tab. The symbol for manual input of measured values is displayed above the measured value.

You have the following options for continuing:

- ► Measure more vital signs → Measuring vital signs
- ► Enter more vital signs manually → Entering vital signs manually
- ► Stop the measurement → Stopping a measurement

#### NOTE

Follow the safety precautions in the instructions for use for your thermometer.

- 1. Measure body temperature as described in the instructions for use for your thermometer.
- 2. Call up a patient file  $\rightarrow$  Calling up a seca patient file.
- 3. In the Vital signs tab, keep the **TEMP** field depressed for at least three seconds:

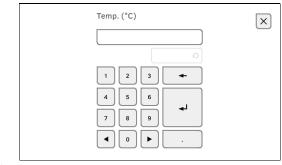

The Temperature: manual entry dialog window is displayed:

Temperature: manual entry			
Enter method			
Oral	O 🝞 Ear		
O 🛉 Axillary	O 🐺 Skin		
O 📲 Rectal	O ₽.º Contactless		
Cancel			

**Entering temperature manually** 

- 4. State the measuring method:
  - a) Press the appropriate key
  - b) Press the **Confirm** key

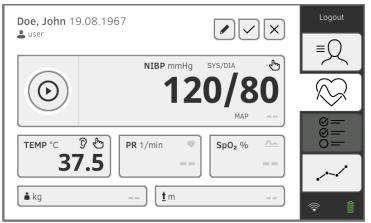

A numerical keypad appears:

- 5. Enter body temperature:
  - a) Enter the value

The value entered appears in the **TEMP** field of the Vital signs tab. The symbol for manual input of measured values is displayed above the measured value.

You have the following options for continuing:

- ► Measure more vital signs → Measuring vital signs
- ► Enter more vital signs manually → Entering vital signs manually
- ► Stop the measurement → Stopping a measurement

#### NOTE

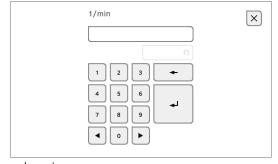

- Follow the safety precautions in the instructions for use for your pulse rate measuring device.
- 1. Measure pulse rate as described in the instructions for use for your pulse rate measuring device.
- 2. Call up a patient file  $\rightarrow$  Calling up a seca patient file.
- 3. In the Vital signs tab, keep the **PR** field depressed for at least three seconds:

# 17-10-05-395-002\_12-2021B

# Entering pulse rate manually

4. A numerical keypad appears:

5. Enter the pulse rate:

a) Enter the value

The value entered appears in the **PR** field of the Vital signs tab. The symbol for manual input of measured values is displayed above the measured value.

# 6.6 Analyzing measurement

- → Viewing current measured results
- → Analyzing vital signs (history)

#### NOTE

- In order to be able to view analyses, you must assign the current measurement to a seca patient file → Stopping a measurement or call up a seca patient file → Calling up a seca patient file.
- This section is restricted to navigation in the Analysis tab. For details about analysis parameters and modules, see the sections entitled
   → Analysis parameters and → Analysis modules.

In order to view a summary of the current measured results, proceed as follows:

1. Press the Analysis tab.

The module overview is displayed.

Doe, John	Logout
▲ user Last measurement: 27.10.2021, 13:28:14	≡Q
Development/growth Vital signs	$\bigotimes$
	000
	~
	1

#### 2. Press an analysis module.

A parameter overview of the current measured results is displayed:

Vital sig	<b>ohn *</b> 19.08.1967 ns asurement: 27.10.2021, 11:59:18	×	Logout
NIBP	Blood pressure	120 mmHg 80 mmHg	<u> </u>

Sp02	Oxygen saturation	100 %	ଅକ୍ଷ ଆ
ТЕМР	Temperature	37.5 °C	
<b>C</b> Developm	Summary of modules	$\rightarrow$	••••
You hav	e the following options for contin	uing:	
	ress the lodules	keys: View	more analysis
► Pi	ress the key: Return to th	ne previous view	

# Viewing current measured results

# Analyzing vital signs (history)

To view the history of an analysis parameter, proceed as follows:

1. Call up a parameter overview  $\rightarrow$  Viewing current measured results.

,	Doe, John * 19.08.1967 Vital signs		Logout
Last mea	surement: 27.10.2021, 11:59:18		≡∩
NIBP	Blood pressure	120 mmHg 80 mmHg	
PR	Pulse rate	69 1/min	$\bigotimes$
Sp02	Oxygen saturation	100 %	88 1
ТЕМР	Temperature	37.5 °C 🗖	
<b>C</b> Developm	Summary of modules	$\rightarrow$	~~~/ ()

2. Press the parameter whose history you wish to view.

All measurements for the selected analysis parameter are displayed. The latest measurement is selected automatically:

example, weight Vital signs NIBP	reducti	<b>on</b> *01.0	18.1961 ×
12.01.2016	16:01:00	129 mmHg 70 mmHg	
12.12.2015	19:26:00	149 mmHg 91 mmHg	
21.11.2015	17:14:00	135 mmHg 83 mmHg	
03.10.2015	13:51:00	139 mmHg 89 mmHg	
History: 1 selected			$\checkmark$

You have the following navigation options:

- Press the drop-down menu: Filter measured results by period. Then continue at step 5.
- ► To select values for the history individually: continue at step 4.

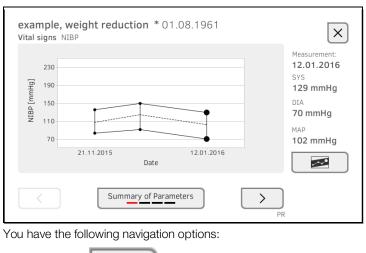

Press the Way key: Return to the previous view

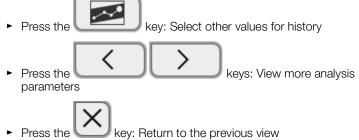

#### NOTE

Just a single comment can be added to each measured result. Existing comments will be overwritten.

3. Press the \_\_\_\_\_ checkboxes for all the measurements you want to look at in the history.

 Press the key. The history is displayed (in this case three measurements)

# 7. OPERATION WHEN CONNECTED TO AN EMR SYSTEM

- → Switching on the device
- → Measuring
- → Logging in with EMR system user ID
- → Calling up patient data from the EMR system
- → Saving measurements in the EMR system
- → Recording clinical observations

Your administrator can set up the device so that it communicates with your EMR system. In this case, the following additional functions are available:

- Log in with EMR system user ID
- · Call up EMR system patient data on the device
- Submit measured results to the EMR system
- Record clinical observations

#### NOTICE!

#### Faulty operation, implausible measured results

► Connection of the device to your EMR system is based on the technical and regulatory situation in your institution. In the individual case, this may lead to the device behaving differently to the way described in these instructions for use. If you have any questions, contact your administrator.

#### 7.1 Switching on the device

#### NOTE

To prevent faulty input, we recommend entering IDs with the aid of a barcode scanner; information about compatible barcode scanners can be found here:  $\rightarrow$  Optional accessories and spare parts.

- 1. Ensure that a barcode scanner is connected to the free USB interface of the device.
- 2. Press the ON/OFF key of the monitor.
  - The LED of the ON/OFF key is white.
- 3. Wait until the Vital signs tab is displayed:

No patient file loaded		×	Login
N	IBP mmHg SYS/DIA	•	=
$\odot$			$\bigotimes$
	МАР		8 
TEMP °C 🕜 🐏 🖁 PR 1/r	nin ♥ SpO₂ %	<u>~</u> ]	Ō=
▲ kg ==	<u>t</u> m		뭓

You have the following options for continuing:

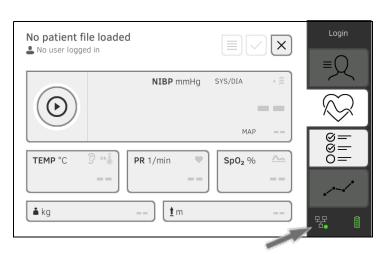

- ► → Measuring with an active connection to an EMR system
- ► → Measuring with an interrupted connection to an EMR system

# 7.2 Measuring

- → Measuring with an active connection to an EMR system
- → Measuring with an interrupted connection to an EMR system

# Measuring with an active connection to an EMR system

If the device has an active connection to the EMR system, proceed as described in the following sections:

- 1. → Scanning EMR system user ID (recommended)
- 2. → Scanning patient ID (recommended)
- 3.  $\rightarrow$  Measuring vital signs
- 4.  $\rightarrow$  Adding weight and height
- 5. → Saving measurements in the EMR system

The device provides the option of performing measurements with an interrupted connection to the EMR system. The measurements are temporarily saved on the device and can be submitted as soon as the connection to the EMR system is active again.

No patient fi L No user logge			×	Login
	NIBP mmHg	SYS/DIA	• 🏯

		MAP		<u> </u>
TEMP °C		Sp0₂ %	<u>~</u>	⊗ <u>=</u> 0=
🛓 kg	<b><u>t</u> m</b>			, ₩ 1

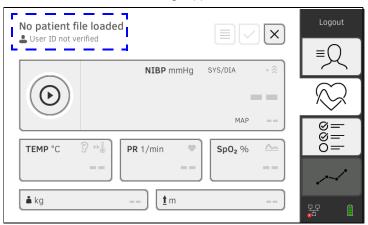

To perform a measurement with an interrupted connection to an EMR system, proceed as follows:

# Measuring with an interrupted connection to an EMR system

- 1. Log yourself in:
  - a) Scan EMR system user ID
  - b) Confirm status message

The User ID not verfied message appears:

#### NOTE

If you are not sure if this function is enabled, contact your administrator.

- 2. Call up a patient file:
  - a) Scan patient ID
  - b) Confirm status message

The patient ID is displayed:

FN222222585 LUser ID not verif		Logout
	<b>NIBP</b> mmHg SYS/DIA - இ	Ţ

	▶ ⑧         PR 1/min         ♥	0=
📥 kg	) <b>(1</b> m)	동 ()

- 3. Perform the measurement as described in the following sections:
  - ► → Measuring vital signs
  - ► → Adding weight and height
  - ► → Stopping a measurement

The measurement is saved in the **Unsubmitted measurements** list.

- 4. Log in again when the connection to the EMR system is active again.
- Proceed as described in this section: → Using the Unsubmitted measurements list.

# 7.3 Logging in with EMR system user ID

If the device is connected to your EMR system, you must log in to the device using your EMR system user ID. You have the following options:

- → Scanning EMR system user ID (recommended)
- → Entering EMR system user ID manually
- 1. Scan your EMR system user ID.

Your EMR system user ID is displayed in the input field.

- Enter your EMR system password. The Vital signs tab is displayed. You can call up patient data from the EMR system → Calling up patient data from the EMR system.
- Entering EMR system user ID manually

Scanning EMR system user ID

(recommended)

1. Press the **Login** key.

		Login
seca	*	
		$\otimes$
	() 	0000
	$\checkmark$	$\sim$
		뮴 ()

The login window is displayed.

2. Enter your EMR system user ID.

Your EMR system user ID is displayed in the input field.

 Enter your EMR system password. The Patient tab is displayed. You can call up patient data from the EMR system → Calling up patient data from the EMR system.

# 7.4 Calling up patient data from the EMR system

You have the following options for calling up patient data from the EMR system:

- → Scanning patient ID (recommended)
- → Manually entering patient ID

Scanning patient ID (recommended)

If you logged in from the Vital signs tab using a scanner ( $\rightarrow$  Logging in with EMR system user ID), the Vital signs tab continues to be shown after login:

1. Scan the patient ID.

The patient data are shown in the Patient information dialog window.

First name Albert		
Surname Normal		
Date of birth:	02.01.1988	

2. Ensure that the patient data displayed are correct.

The patient data are transmitted to the device and displayed in the Vital signs tab.

# Manually entering patient ID

If you logged in using a keypad (→ Entering EMR system user ID manually), the Patient tab is shown after login:

Scan patient barcode.	Find patient file	Logout
		≡Q
	$\square$	$\bigotimes$
$\mathbb{R}$		000
		먛. ()

1. Press the Find patient file key.

2. Enter patient ID using the keypad The patient data are shown in the Patient information dialog window.

(i) Patient	information	
First name <b>Albert</b>		
Surname <b>Normal</b>		
Date of birth: Patient ID:	02.01.1988 FNSECA1	
		<ul> <li></li> </ul>

- 3. Ensure that the patient data displayed are correct.
- 4. Press the key.

The patient data are transmitted to the device and displayed in the Vital signs tab.

# 7.5 Saving measurements in the EMR system

- → Submitting the measurement directly to the EMR system
- → Saving measurement temporarily and submitting it later
- → Using the Unsubmitted measurements list

# Submitting the measurement directly to the EMR system

To submit a measurement directly to the EMR system, proceed as follows:

- 1. In the Vital signs tab, press the key.
- 2. In the dialog window, press the Submit key:

(i) Measuremen	ts	
Save or submit measur submitted to your EMR device only, not sent.		easurement will be ent will be saved on this
Submit	Cancel	Save

The measurement is submitted to the EMR system and assigned to the EMR system patient file.

The measurement procedure is complete.

The patient data are removed from the display.

You can temporarily save a measurement on the device, for example to have the measured results assessed by a third party. The measurement can then be submitted to the EMR system. This ensures that only plausible measured results are saved in the EMR system.

- 1. In the Vital signs tab, press the key.
- 2. In the dialog window, press the **Save** key:

(i) Measurements
Save or submit measurement? "submit": Measurement will be submitted to your EMR. "save": Measurement will be saved on this device only, not sent.
Submit Cancel Save

The measurement is assigned to the patient ID and saved temporarily on the device.

The measurement procedure is complete.

The measurement can be assessed in the Unsubmitted measurements list and submitted to the EMR system  $\rightarrow$  Using the Unsubmitted measurements list.

# Saving measurement temporarily and submitting it later

# Using the Unsubmitted measurements list

- → Confirming offline measurement (EMR system connection)
- → Viewing details
- → Submitting the measurement
- → Deleting a measurement

In the **Unsubmitted measurements** list, you can view and assess the details of a measurement before submitting the measurement to the EMR system. The list is available in the Patient and Vital signs tabs:

A measurement appears in the list under the following conditions:

- In the **Measurements** dialog window, press the **Save** key → Saving measurement temporarily and submitting it later.
- The measurement cannot be submitted because the connection to the EMR system is interrupted.

To open the **Unsubmitted measurements** list, proceed as follows:

- 1. Log in  $\rightarrow$  Scanning EMR system user ID (recommended).
- 2. Ensure that the Patient and Vital signs tabs are active.

The Unsubmitted measurements list is displayed:

FN2222225852	10:19:54	8 1
careaware2, jira12372	13.07.2020	
FN2222225852	10:10:50	
FN2222225852	10:18:50 13.07.2020	(+)
FN2222225852	10:14:24	
FN2222225852	13.07.2020	∿ 3

#### NOTE

Measurements marked yellow (offline measurement) contain unconfirmed patient data - because the connection to the EMR system was interrupted, for example.

#### Confirming offline measurement (EMR system connection)

Measurements marked yellow (offline measurement) contain unconfirmed patient data - because the connection to the EMR system was interrupted during patient/user identification, for example. These measurements have to be confirmed before you can view details or submit the measurement to your EMR system.

1. Ensure that the connection to the EMR system is active.

2. Press an offline measurement (marked yellow).

Unsul L SECA	omitted measuremen	ts		×
	Select all			
	FN2222225852 careaware2, jira12372	10:19:54 13.07.2020	<b>占</b>	
	FN2222225852	10:18:50		í l
	FN2222225852	13.07.2020	•	
	FN222225852 FN222225852	10:14:24 13.07.2020	∿ 3	
Measure	ements: 0 selected			$\checkmark$

The patient data are displayed in the **Patient information** dialog window:

(i) Patient information	
First name Albert	
Surname Normal	
Date of birth: 02.01.1988 Patient ID: FNSECA1	
$\checkmark$	·

3. Ensure that the patient data displayed are correct.

- The measurement is confirmed. The yellow marking is no longer displayed in the **Unsubmitted measurements** list. The details of the measurement are displayed **>** Viewing details
  - The details of the measurement are displayed  $\rightarrow$  Viewing details.

#### **Viewing details**

- 1. Press a measurement.
  - The details of the measurement are displayed:

Result	Value	Unit	
Average (NIBP)	<b>120</b> SYS <b>100</b> MAP <b>92</b> DIA	mmHg	
Pulse rate	86	1/min	
SpO <sub>2</sub>	98	%	
Temperature	37.0	°C	

#### NOTE

Measurements marked blue contain mean values. If you press the measurement, you can view the individual results.

2. Press the key to close Detail view.

#### Submitting the measurement

- 1. Ensure that the connection to the EMR system is active:
- 2. Press the checkboxes of the measurements to be submitted:

FN2222225852	10:19:54	ለ ተ	
careaware2, jira12372	13.07.2020		
FN2222225852	10:18:50		
FN2222225852	13.07.2020	٩	
FN2222225852	10:14:24	-	
FN2222225852	13.07.2020	∿ ⊜	
<u></u>			

3. Press the key.

The measurements are submitted to the EMR system. The measurements are deleted from the list.

#### NOTE

- Only confirmed measurements are submitted → Confirming offline measurement (EMR system connection).
- In the EMR system, measurements from the **Unsubmitted measurements** list are assigned to the user who submitted them, not to the user who performed them.

# Deleting a measurement

1. Press the checkboxes \_\_\_\_\_ of the measurements to be deleted:

# 7.6 Recording clinical observations

- → Introduction
- → Entering/amending clinical observations

Introduction

The device provides the option of recording clinical observations. The options for inputting clinical observations are configured in line with the specifications of your institution.

#### NOTE

If there is no configuration on the device or if you want to change the configuration of the clinical observations, contact your administrator.

You can enter clinical observations without login and without patient identification. We recommend calling up a patient file  $\rightarrow$  Calling up a seca patient file **before** making your entry. Clinical observations can be submitted to the EMR system together with other vital signs in the Vital signs tab.

# Entering/amending clinical observations

1. Press the Clinical observations tab.

The list of parameters is displayed (example for a configuration):

	Clinical observations		×
	Level of consciousness	: not defined	
	My Comment	: New patient	
	Respiratory rate in Breaths/min	: 14	
	Oxygen therapy	: No	
	Bowel movement regularity	: Regular	
	Pain severity 0-10	: 1	
			$\rightarrow$
2.	Press the	> keys to navigate	on the pages

and to view other parameters.

3. Press the parameter for which you would like to enter or amend an observation.

You have the following options for input depending on configuration:

- ► Free text
- Numerical value
- Simple selection via option field (example):

Confused	O Lethargic
O Obtunded	O Stuporous
O Unresponsive	O Alert
O not defined	

- 4. Enter the observation.
  - You have the following options for continuing:
    - ► Enter more observations → Recording clinical observations
    - Press the key: Adopt observations
    - Press the Way: Delete observations
    - ► Submit all observations to the EMR system: → Saving measurements in the EMR system

# 8. HYGIENE TREATMENT

→ Cleaning

→ Disinfecting

- → Removing/fitting probe holder (devices with temperature probe)
- → Removing/fitting the magazine holder (devices with in-ear thermometer)
- → Sterilizing

WARNING! Electric shock

The device is not de-energized when the on/off key is pressed and the display goes out. Use of fluids on the device may cause electric shock.

- Ensure that the device is switched off before performing any hygiene treatment.
- Disconnect the power supply connector before performing any hygiene treatment.
- Before each hygiene treatment, take the rechargeable battery out of the device (if present and removable).
- Ensure that no fluids penetrate the device.

#### NOTICE!

#### Damage to device

Inappropriate detergents and disinfectants may damage the sensitive surfaces of the device.

- Use only disinfectants free of chlorine and alcohol which are explicitly suitable for acrylic sheet and other sensitive surfaces (active ingredient: quaternary ammonium compounds, for example).
- Do not use caustic or abrasive detergents.
- Do not use organic solvents (e.g. white spirit or petroleum spirit).
- Use disinfectants including the active ingredient 70 % isopropanol only for measuring accessories for measuring vital signs.

# 8.1 Cleaning

• Clean the device and its accessories as described in the table:

Component (depending on version)	Interval	Cleaning
<b>seca mVSA 535</b> : Monitor with SmartBucket	As required	<ol> <li>Remove all the measuring accessories (measuring devices and consumables) from the device (depending on version)</li> <li>→ Removing the probe holder</li> <li>→ Removing the magazine holder</li> <li>Moisten a soft cloth with a soap solution</li> <li>Wipe over all surfaces</li> <li>Allow to air-dry for approx. 30 minutes</li> </ol>

Moisten a soft cloth with a mild soap solution: Ratio of water to soap solution: 20:1, temperature: Max. 55 °C (130 °F)</li> <li>3. Wring out the cloth so that no excess liquid can penetrate the in-ear thermometer</li> <li>4. Wipe over in-ear thermometer and cable</li> <li>5. Dry the in-ear thermometer and cable using a lint-free cloth</li> <li>6. Discard probe cover</li> </ul>
	As required	<ul> <li>Measuring head and lens:</li> <li>1. Carefully remove all foreign particles using a cloth moistened with alcohol (70 % isopropanol)</li> <li>2. Wipe dry the lens at the tip of the measuring head with a lint-free cloth (e.g. spectacle-cleaning cloth)</li> <li>3. Make sure that the lens at the tip of the measuring head does not have any fingerprints or marks on it</li> <li>4. Allow the in-ear thermometer to air-dry completely</li> </ul>
Magazine holder for probe covers (in-ear thermometer)	As required	<ol> <li>→ Removing the magazine holder</li> <li>Moisten a soft cloth or cotton bud with a mild soap solution</li> <li>Wipe over the surfaces of the magazine holder</li> <li>Allow the magazine holder to air-dry completely</li> </ol>
SpO <sub>2</sub> sensor with cable	Follow the ma	anufacturer's instructions for use
Patient cable for SpO <sub>2</sub> sensor	Follow the ma	anufacturer's instructions for use

# 8.2 Disinfecting

1.	Follow	the instru	ctions for u	ise for the	disinfectant.

2. Disinfect the device and its accessories as described in the table:

Component (depending on equipment)	Interval	Disinfecting
<b>seca mVSA 535</b> : Monitor with SmartBucket	As required	<ol> <li>Remove all the measuring accessories (measuring devices and consumables) from the device (depending on version):</li> <li>→ Removing the probe holder</li> <li>→ Removing the magazine holder</li> <li>Moisten a soft cloth with disinfectant (active ingredient: quaternary ammonium compounds)</li> <li>Wipe over all surfaces</li> <li>Allow to air-dry for approx. 30 minutes</li> </ol>
Blood pressure cuff and compressed air tube	As required	<ol> <li>Moisten a soft cloth with disinfectant (active ingredient: 70 % isopropanol)</li> <li>Wipe over cuff and compressed air tube</li> <li>Rinse thoroughly with water</li> <li>Allow to dry at room temperature</li> </ol>
Temperature probes (red/blue) with cable	As required	<ol> <li>Discard probe cover and dispose of it</li> <li>Moisten a soft cloth with disinfectant (active ingredient: 70 % isopropanol)</li> <li>Wipe over temperature probe</li> <li>Shake out temperature probe so that no liquid remains in it</li> <li>Allow to air-dry for approx. 30 minutes</li> </ol>
Probe holder (red/blue)	As required	<ol> <li>A Removing the probe holder</li> <li>Moisten a cotton bud with disinfectant (active ingredient: 70 % isopropanol)</li> <li>Wipe over the inside of the probe holder</li> <li>Allow to air-dry for approx. 30 minutes</li> </ol>
In-ear thermometer, cable, measuring head and lens	As required	<ol> <li>Discard probe cover and dispose of it</li> <li>Wipe over in-ear thermometer several times with a cloth moistened with alcohol (70 % isopropanol) so that all surfaces are visibly moist for at least one minute</li> <li>Make sure that the lens at the tip of the measuring head does not have any fingerprints or marks on it</li> <li>Allow the in-ear thermometer to air-dry completely</li> </ol>
Magazine holder for probe covers (in-ear thermometer)	As required	<ol> <li>→ Removing the magazine holder</li> <li>Moisten a cotton bud with disinfectant (active ingredient: quaternary ammonium compounds)</li> <li>Wipe over surfaces</li> <li>Allow to air-dry for approx. 30 minutes</li> </ol>
$SpO_2$ sensor with cable		anufacturer's instructions for use
Patient cable for SpO <sub>2</sub> sensor	Follow the ma	anufacturer's instructions for use

# 8.3 Sterilizing

This device may not be sterilised.

#### Removing/fitting probe holder (devices with temperature probe) 8.4

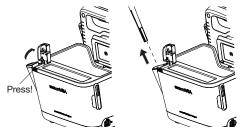

#### WARNING! Patient hazard

The color of the probe holder indicates whether a device is intended for oral/axillary or rectal temperature measurement. This distinction can no longer be made once the probe holder has been removed. Confusing the probe holders can lead to cross-contamination.

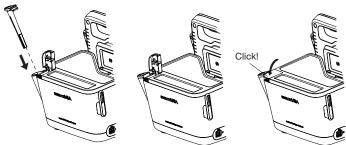

• Ensure that the probe holder is fitted back in the device from which it was removed following a hygiene treatment.

#### 1. Open the covering cap.

2. Remove the probe holder.

1. Insert the probe holder in the SmartBucket as shown in the illustration below.

2. Close the cover cap until you hear it engage.

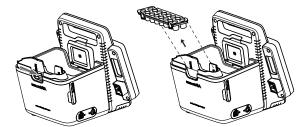

## Fitting the probe holder

Removing the probe holder

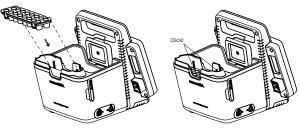

# 8.5 Removing/fitting the magazine holder (devices with in-ear thermometer)

## Removing the magazine holder

- 1. Lift the magazine holder with a finger until the magazine holder comes out of its catch.
- 2. Remove the magazine holder.

- 1. Insert the magazine holder in the SmartBucket as shown in the illustration below.
- 2. Push down the magazine holder until you hear it engage.

# Fitting the magazine holder

# 9. FUNCTION CHECK

#### 9.1 Device

Perform a function check prior to each use.

A complete function check includes:

- visual inspection for mechanical damage
- · checking the alignment of the device
- visual and function check of the display elements
- function check of all the controls shown in the section entitled "Overview"
- · function check of optional accessories

If you notice any faults or deviations during the function check, first try to resolve the error with the aid of the section entitled "Troubleshooting" in this document.

# Personal injury

If you notice any faults or deviations during the function check which cannot be resolved with the aid of the section entitled "Troubleshooting" in this document, you may not use the device.

- Have the device repaired by seca Service or by an authorized service partner.
- ► Follow the section entitled "Servicing" in this document.

#### 9.2 COVIDIEN™ GENIUS®3 in-ear thermometer

For the COVIDIEN<sup>™</sup> GENIUS<sup>®</sup>3 in-ear thermometer, the manufacturer CardinalHealth<sup>™</sup> recommends a function check if one of the following situations applies:

- In-ear thermometer was not used in accordance with purpose
- In-ear thermometer was dropped
- In-ear thermometer was stored below -25 °C or above +55 °C

# **10.SERVICING**

# 10.1 Device

The measuring technology of this device must be checked every two years. We recommend servicing the whole device as part of this check.

#### NOTICE!

#### Incorrect measurements as a result of poor servicing

- Have servicing and repairs carried out exclusively by seca Service or by an authorized service partner.
- You can find service partners in your area at www.seca.com or by sending an e-mail to service@seca.com.

# 10.2 COVIDIEN™ GENIUS®3 in-ear thermometer

For the COVIDIEN<sup>™</sup> GENIUS<sup>®</sup>3 in-ear thermometer, the manufacturer CardinalHealth<sup>™</sup> recommends performing calibration regularly every 25 weeks. The COVIDIEN<sup>™</sup> Genius Checker/Calibrator is required for calibration. If you do not have a COVIDIEN<sup>™</sup> Genius Checker/Calibrator available, get in touch with your contact at CardinalHealth<sup>™</sup>.

# 11.1 Monitor

Fault	Cause	Remedy	
	No power supply	Provide power supply	
Monitor cannot be switched on	Rechargeable battery discharged	Provide power supply and charge rechargeable battery	
	Rechargeable battery faulty	Replace rechargeable battery	
	Device on standby	<ul><li>Touch the touchscreen display</li><li>Press the ON/OFF key</li></ul>	
Touchscreen display remains off	Device not switched on	Switch on device	
remains on	No power supply	Check whether power is being supplied	
	Touchscreen display faulty	Inform seca Service	
Touchscreen display not reacting	Device in undefined state following implausible input	<ul> <li>Switch off the device (press and hold the ON/OFF key for approx. 15 seconds)</li> <li>Switch the device back on</li> </ul>	
Image on touchscreen display faulty	Touchscreen display faulty	Inform seca Service	
		Use the old password	
Password not accepted	Following a backup, the old passwords are valid again	<ul> <li>Administrator:</li> <li>If you no longer know the old password, assign a new password</li> <li>Have the administrator password reset by seca Service</li> </ul>	
Vital signs tab not active	USB connecting cable of the SmartBucket not connected to the monitor	<ul> <li>Connect the USB connecting cable of the SmartBucket to the monitor</li> <li>Restart the device</li> </ul>	
Patient and user data	USB stick contains several backup copies	Ensure that there is only one folder on the USB stick with the designation <ddmmyyyy_hhmm>_seca_monitor_b ackup (if necessary, rename other folders)</ddmmyyyy_hhmm>	
cannot be restored manually	Backup copy on the USB stick has been renamed	Ensure that backup copies are saved in the folder with the designation <ddmmyyyy_hhmm>_seca_monitor_b ackup (if necessary, rename folders)</ddmmyyyy_hhmm>	

# **11.2 Vital signs measurement**

- → General
- → Blood pressure measurement
- → COVIDIEN<sup>TM</sup> FILAC<sup>TM</sup> 3000 temperature measurement
- → COVIDIEN<sup>TM</sup> GENIUS<sup>®</sup>3 temperature measurement
- → SpO<sub>2</sub> measurement

## General

Fault	Cause	Remedy
Vital signs tab is not displayed	USB connecting cable of the SmartBucket not connected to the monitor	<ul> <li>Connect the USB connecting cable of the SmartBucket to the monitor</li> <li>Restart the device</li> </ul>
seca mVSA 535 is being operated on a wheeled stand: Measured results for vital signs are implausible	<ul> <li>Original seca USB connecting cable not being used</li> <li>USB extension cable also in use</li> </ul>	<ul> <li>Use original seca USB connecting cable (in scope of delivery for the wheeled stand)</li> <li>Do not use a USB extension cable</li> </ul>
Manual vital signs input not possible	Measured values outside permitted range	Observe permitted range, technical data: → Manual input of vital signs

## **Blood pressure measurement**

Fault	Cause	Remedy	
	Excessive patient movement	Ask the patient to move as little as possible	
	Incorrect blood pressure cuff used	<ul> <li>Use correct size of blood pressure cuff</li> <li>Only use seca blood pressure cuffs</li> </ul>	
Implausible measured results	Blood pressure cuff not applied correctly	Apply blood pressure cuff correctly, see instructions for use for blood pressure cuff	
	Blood pressure cuff applied to an extremity to which there is intravenous access	Apply blood pressure cuff to a different extremity	
	Incorrect blood pressure cuff used	Use correct size of blood pressure cuff     Only use seca blood pressure cuffs	
Insufficient cuff pressure	Blood pressure cuff or compressed air tube leaking	Dispose of blood pressure cuff, use replacement	
	Pump in device faulty	Do not continue using device and have it repaired by seca Service	
No option to select Multiple measurement in the NIBP settings dialog window	Administrator has configured a measuring profile. The name of the measuring profile is displayed	<ul> <li>Not a malfunction</li> <li>Press the name of the measuring profile</li> <li>→ Performing a multiple measurement.</li> </ul>	
Blood pressure values do not appear in the EMR system	Multiple measurement was performed	<ul> <li>For current measurement:</li> <li>→ Modifying presets and → Starting a single measurement</li> <li>Administrator:</li> <li>Specify Individual measurement as prese</li> <li>→ Presets for blood pressure</li> </ul>	

# COVIDIEN™ FILAC™ 3000 temperature measurement

Fault	Cause	Remedy
No temperature measurement possible	Temperature module of the SmartBucket not activated	Administrator: Activate temperature module: System\SmartBucket tab
	Special patient condition, such as hypothermia	<ul> <li>Assess patient vital signs using alternative means</li> <li>Switch from predictive measurement mode to direct mode</li> </ul>
	Rectal measurement performed with blue temperature probe	Only perform rectal measurement with red temperature probe
	Oral/axillary measurement performed with red temperature probe	Only perform oral/axillary measurement with blue temperature probe
Implausible measured results, temperature measurement unsuccessful	Patient activity before oral temperature measurement: • Physical exertion • Eating/drinking • Brushing teeth • Smoking	Only perform oral temperature measurement about 20 minutes after any of these activities
	Set measuring position does not match actual measuring position	<ul> <li>Select measuring position to suit the probe used</li> <li>Set correct measuring position on device</li> </ul>
	No probe cover used	<ul> <li>Disinfect the temperature probe</li> <li>Disinfecting</li> <li>Use probe cover</li> </ul>
	Temperature probe faulty	Dispose of temperature probe, use replacement
Temperature probe cannot be pushed completely into the probe holder	Probe cover not discarded	<ul> <li>Carefully withdraw temperature probe and probe cover from the probe holder</li> <li>Discard probe cover</li> <li>Push the temperature probe into the probe cover</li> </ul>

# COVIDIEN<sup>™</sup> GENIUS<sup>®</sup>3 temperature

### measurement

Fault	Cause	Remedy	
No temperature measurement possible	Temperature module of the SmartBucket not activated	Administrator: Activate temperature module: System\SmartBucket tab	
	Patient temperature exceeds measuring range of in-ear thermometer	Assess patient vital signs using alternative	
	Patient temperature undershoots measuring range of in-ear thermometer	means	

17-10-05-395-002\_12-2021B

Fault	Cause	Remedy
	Ambient temperature exceeds permitted range	<ul> <li>Modify ambient temperature</li> <li>Perform measurement at a location with</li> </ul>
	Ambient temperature undershoots permitted range	an ambient temperature within the permit- ted range
Measurement does not	No probe cover used	<ul> <li>Disinfect the in-ear thermometer</li> <li>→ Disinfecting</li> <li>Use probe cover</li> </ul>
start	Probe cover not properly located on measuring head	Ensure that probe cover engages audibly with the measuring head
	Probe cover damaged	Dispose of damaged probe cover, use new one
Measured result unexpectedly high	Probe cover damaged	Dispose of damaged probe cover and use new one
Measured result unexpectedly low	<ul> <li>Lens of measuring head blocked</li> <li>Opening in probe cover blocked</li> </ul>	<ul><li>Clean measuring head</li><li>Dispose of probe cover, use new one</li></ul>
unexpectedly low	Patient's auditory canal blocked	Clean auditory canal
	Probe cover damaged	Dispose of damaged probe cover and use new one
Implausible measured results	Measuring position on in-ear thermometer in wrong place	Correct setting on in-ear thermometer (see instructions for use for in-ear thermometer)
	In-ear thermometer faulty	Dispose of in-ear thermometer, use replacement
Different temperature units on monitor and display	Setting of unit on monitor and on in-ear thermometer is not synchronized automatically. If necessary, the monitor converts measured results automatically.	<ul> <li>Press the °C/°F key on the in-ear thermometer</li> <li>Change units on the monitor (administrator rights required)</li> </ul>
	Internal memory: Checksum error	<ul> <li>Put on a new probe cover and repeat measurement.</li> <li>If the error occurs again, contact seca Service</li> </ul>
	Thermometer no longer calibrated	<ul><li>Do not continue using device</li><li>Contact seca Service</li></ul>

# $\mathbf{SpO}_2$ measurement

Fault	Cause	Remedy
	Intra-aortic balloon pump affecting pulse rate	Check pulse rate using ECG
	Sensor damp	<ul><li> Dry sensor</li><li> Use dry sensor</li></ul>
	Sensor not applied correctly	Apply sensor correctly, see instructions for use for sensor
	Strong ambient light	Cover application site with opaque material
Implausible measured results	Electromagnetic interference	<ul> <li>Switch off devices in proximity, isolate interfering device</li> <li>Align interfering device differently or set up in a different location</li> <li>Increase the distance between this device and the interfering device</li> </ul>
	Poor perfusion	<ul> <li>Assess patient vital signs using alternative means</li> <li>Apply blood pressure cuff to location with better perfusion</li> </ul>
Measurement not possible	Masimo SET <sup>®</sup> only: Sensor service life expired	Use new Masimo SET® sensor.
	Sensor or patient cable defective	Dispose of sensor or patient cable, use spare part
Measurement not possible	Sensor or patient cable defective	Dispose of sensor or patient cable, use spare part
Pulse is not found or is lost	Sensor too rigid	<ul><li>Use suitable size of sensor</li><li>Apply sensor to a different finger</li></ul>
	Strong ambient light	Cover application site with opaque material
	Poor perfusion	<ul> <li>Assess patient vital signs using alternative means</li> <li>Apply sensor to a location with better perfusion</li> </ul>

# **11.3 Network connection**

Fault	Cause	Remedy
	WiFi function of device is deactivated	Administrator: Activate WiFi
No WiFi connection	Distance between monitor and WiFi router is too big	<ul> <li>Reduce distance</li> <li>Transmit measured results to seca connect 103 software via LAN</li> </ul>
	WiFi not available in your institution	Transmit measured results to seca connect 103 software via LAN
No network connection	Firewall: ports required are not enabled	Administrator: Enable required ports in firewall → Monitor interfaces and network ports
	Firewall/gateway configuration does not permit use of LAN and WiFi in parallel	Administrator: Deactivate one of the two transmission options on the device.

# 11.4 EMR system connection via seca connect 103 software

For more information on using the **seca connect 103** software, see the **seca 103/452** system instructions for use.

Fault	Cause	Remedy
Data transmission cannot be set up between device and seca connect 103	Software versions not compatible	Administrator: Use a compatible version of the seca connect 103 software → Compatibility
Unable to find user ID	No connection to the server	Administrator: Check server connection
	User ID not recognized by the server	Ensure that user ID is valid
Unable to find patient ID	No connection to the server	Administrator: Check server connection
	Patient ID not recognized by the server	Ensure that patient ID is valid
	Scanner not connected correctly	Ensure that the USB stick is correctly located in the USB interface
Unable to scan IDs	Barcode scanner incompatible	Use compatible barcode scanner
	Scanner defective	Replace scanner
There is no request for a password following input of the EMR user ID. The Vital signs tab is displayed immediately	Not a malfunction: The device connection to the EMR system has been configured so that no password needs to be entered.	Administrator: Modify configuration if necessary → Making workflow settings
	No patient file available in the EMR system	Create patient file in the EMR system
Unable to find EMR system	Error scanning patient ID	Scan patient ID again
patient data	No network connection to the EMR system	Administrator: Check the network connection and set up again if necessary
Login using EMR system user ID not possible	EMR system connection interrupted, device set up so that no measurements are possible	Administrator: If possible, allow measurements with the EMR system connection interrupted → Making workflow settings
Blood pressure values do not appear in the EMR system	Multiple measurement was performed	<ul> <li>For current measurement:</li> <li>→ Modifying presets and → Starting a single measurement</li> <li>Administrator:</li> <li>Specify Individual measurement as preset</li> <li>→ Presets for blood pressure</li> </ul>
	Network cable not plugged in correctly	Check whether the network cable is connected correctly and that the connectors are firm in their sockets
<b></b>	Network cable defective	Replace network cable
Not possible to submit measured results to the EMR system	Device outside WiFi range	Bring device into WiFi range
	No network connection to the EMR system	Administrator: Check the network connection and set up again if necessary
	Network connection interrupted	If network connection active → Using the Unsubmitted measurements list

# **11.5 Clinical observations**

Fault	Cause	Remedy
Impossible to update	Saved clinical observations not sent to the EMR system	$\rightarrow$ Submitting the measurement
configuration file	User or administrator logged in to the device	Log out of the device → Logging out/ switching user
Impossible to delete configuration file	Saved clinical observations not sent to the EMR system	→ Submitting the measurement
Clinical observations tab not active	Clinical observations function not available in stand-alone operation	<ul> <li>Administrator:</li> <li>Check whether stand-alone operation or connection to an EMR system is desired</li> <li>If necessary, set up a connection to an EMR system</li> </ul>
	Configuration file invalid	Administrator: Note error message in <b>System</b> tab in the <b>Data management</b> area

# 11.6 seca 360° proximity connection

Fault Cause Remedy		
i duit	No seca 360° proximity connection set	Administrator: → Setting up a seca 360° proximity
Weight or height values do not appear in the display	Network connection interrupted	<ul> <li>Connection</li> <li>LAN: Ensure that the network cable is correctly plugged in and is not damaged</li> <li>WiFi: Reduce distance from router</li> </ul>
	seca scale/measuring rod incorrectly configured	<ul> <li>Administrator: Configure seca scale/ measuring rod as follows:</li> <li>Scan user ID: Required</li> <li>Scan patient ID: Required</li> <li>Confirmation of measurement on seca measuring device: Required</li> <li>Port used: Port configured for communi- cation with the seca connect 103 software (default: 22020) → Setting up a connec- tion to the seca connect 103 software</li> <li>Follow seca 103/452 system instructions for use</li> </ul>
	No measurement has yet been performed using the seca scale/ measuring rod	Perform measurement as described in the instructions for use for the seca scale/seca measuring rod
	seca scale/measuring rod has not submitted a value	Submit value as described in the instructions for use for the seca scale/seca measuring rod
An error message appears in the Weight or Height field	An error occurred on the seca scale/ measuring rod	<ul> <li>Note error message on the display of the seca scale/seca measuring rod</li> <li>Eliminate error as described in the instructions for use for the seca scale/seca measuring rod.</li> <li>Follow seca 103/452 system instructions for use</li> <li>If you are unable to eliminate the error, contact seca Service.</li> </ul>

# COVIDIEN™ FILAC™ 3000 temperature measurement

COVIDIEN <sup>™</sup> FILAC <sup>™</sup> 3000 temperature module		
Measurement modes	Direct, predictive	
Measuring position:		
Blue probes	Oral, axillary	
Red probes	Rectal	
Measuring range		
Direct mode	30 °C - 43 °C (86 °F - 109,4 °F)	
Predictive mode	35,5 °C - 42 °C (95,9 °F - 107,6 °F)	
Measuring time (following application at measuring position)		
Direct:		
All measuring positions	60 - 120 sec	
Predictive:		
Oral, no fever	3 - 5 sec	
Oral, fever	8 - 10 sec	
• Axillary	8 - 12 sec	
• Rectal	10 - 14 sec	
Switchover time from predictive mode to direct mode		
<ul> <li>Measuring position not detected (following removal from probe cover)</li> </ul>	60 sec	
<ul> <li>No stable temperature value obtained (following application)</li> </ul>	70 sec	
Accuracy (water bath):		
Direct mode	± 0,1 °C ( ± 0,2 °F)	
Predictive mode	± 0,1 °C (± 0,2 °F)	
IEC 60601-1: Medical electrical device, type BF	$\mathbf{\dot{\mathbf{x}}}$	
Type of protection against ingress of liquids	IP21	

Clinical accuracy <sup>a b</sup>			
Measuring position:	Oral	Axillary	Rectal
d (age group I)	-0.44	-0.01	0.09
L <sub>A</sub> (age group I)	1.01	0.86	0.99
d (age group II)	-0.21	-0.04	0.12
L <sub>A</sub> (age group II)	0.75	0.65	0.67
σ <sub>r</sub>	0.34	0.28	0.28

a. The clinical accuracy of the COVIDIEN<sup>TM</sup> FILAC<sup>TM</sup> 3000 was determined in a clinical study in accordance with EN 80601-2-56. Clinical bias  $\overline{d}$  and limits of agreement L<sub>A</sub> are quoted for the age group and measuring position in question. Clinical repeatability  $\sigma_r$  is independent of age. The reference body sites of the reference thermometer used in the clinical study correspond to the measuring positions quoted.

b. The age of the test subjects in age group I is between 3 and 4 years. The age of the test subjects in age group II is 5 and above.

<ul> <li>Pulse rate (patient movement)</li> </ul>	$25 \text{ min}^{-1} - 240 \text{ min}^{-1} \pm 5 \text{ digits}$	
Low perfusion performance		
Pulse amplitude	> 0.02 %	
<ul> <li>Transmission</li> </ul>	> 5%	
<ul> <li>Oxygen saturation (SpO<sub>2</sub>)</li> </ul>	± 2 digits	
Pulse rate	± 3 digits	
Resolution:		
<ul> <li>Oxygen saturation (SpO<sub>2</sub>)</li> </ul>	1 %	
Pulse rate	1 min <sup>-1</sup>	
IEC 60601-1: Medical electrical device, type BF	$\mathbf{\dot{\star}}$	

a. The accuracy of the Masimo SET<sup>®</sup> technology with Masimo sensors was validated with no movement in human blood studies with induced hypoxia on healthy adult male and female volunteers with light to dark skin pigmentation in the range from 70 - 100 % for SpO<sub>2</sub> compared to a laboratory CO oximeter and ECG monitor. This fluctuation corresponds to ± 1 standard deviation. Plus or minus one standard deviation covers 68 % of the population.

- b.The accuracy of the Masimo SET<sup>®</sup> technology with Masimo sensors was validated with movement in human blood studies with induced hypoxia on healthy adult male and female volunteers with light to dark skin pigmentation, 2 to 4 Hz rubbing and tapping movements being performed at an amplitude of 1 to 2 cm and a non-repetitive movement being performed at 1 to 5 Hz at an amplitude of 2 to 3 cm in the range from 70 100 % for SpO<sub>2</sub> compared to a laboratory CO oximeter and ECG monitor. This fluctuation corresponds to ± 1 standard deviation and thus covers 68 % of the population.
- c.The accuracy of the Masimo SET<sup>®</sup> technology in the case of poor perfusion was validated on the test bench compared to a Biotek Index 2<sup>™</sup> simulator and the Masimo simulator with signal strengths of over 0.02 % and a transmission of over 5 % for saturations in the range from 70 to 100 %. This fluctuation corresponds to ± 1 standard deviation. Plus or minus one standard deviation covers 68 % of the population.
- d. The accuracy of the pulse rate of the Masimo SET<sup>®</sup> technology with Masimo sensors was validated on the test bench for the range 25 240 min<sup>-1</sup> compared to a Biotek Index 2<sup>™</sup> simulator. This fluctuation corresponds to ± 1 standard deviation. Plus or minus one standard deviation covers 68 % of the population.
- e. The precise data can be found in the directions for use (DFU) for the sensors. Unless otherwise stated, the measuring position for reusable sensors should be changed at least every 4 hours and for adhesive sensors, at least every 8 hours.
- f.The sensor accuracy quoted applies in conjunction with the Masimo technology with a Masimo patient cable used for LNOP sensors, RD SET sensors, the LNCS sensors or the M-LNCS sensors. The numbers stand for ARMS (accuracy root mean square). Because pulse oximeter measurements are statistically distributed measuring procedures, only about two-thirds of the measurements are expected to be in a range of ± Arms compared to the reference value. Unless stated otherwise, accuracy for SpO<sub>2</sub> of 70 % to 100 % is quoted. The accuracy of pulse rate is quoted from 25 to 240 min-1.
- g. The Masimo sensor types M-LNCS, LNOP, RD SET and LNCS exhibit identical optical and electrical properties. They differ in terms of type of attachment (self-adhesive/non-self-adhesive/hook-and-loop cuff), cable length, position of optical components (top or underside of sensor depending on the orientation with the cable), type/size of adhesion point and type of connector (LNOP: modular 8-pin connector; RD: modular 15-pin connector; LNCS: 9-pin, cable-based; M-LNCS: 15-pin, cable-based). All the information about sensor accuracy and instructions on using sensors are included in the instructions for use for the sensors.
- h.Digit: Numerical value by which the last place of a value displayed can deviate from the actual measured value; used to state the accuracy of a measuring device (example: displayed  $SpO_2$  value 70 %, accuracy ± 2 digits; actual value is between 68 % and 72 %).

#### Accuracy of Masimo SET® DCI/DCIP sensors

Measured values		
Measuring	A	
range	RMS	
90-100 %	0,60%	
80-90 %	0,54%	
70-80 %	0,67%	
Total value		
70-100 %	2%	

#### **Masimo Patent Information**

Masimo Patents: www.masimo.com/patents.htm

### **No Implied License Statement**

Possession or purchase of this device does not convey any express or implied license to use the device with unauthorized sensors or cables which would, alone or in combination with this device, fall within the scope of one or more of the patents relating to this device.

## seca $SpO_2$ measurement

seca SpO $_2$ module <sup>a b</sup>		
Measurement	Functional oxygen saturation	
Measuring method	Spectrophotometry (red/infrared)	
LED wavelength:		
Red	660 nm	
Infrared	900 nm	
Maximum light output	5 mW	
This information may be of particular interest to clinicians		
Measuring range:		
• SpO <sub>2</sub>	0 % - 100 %	
Pulse rate (default)	30 min <sup>-1</sup> - 240 min <sup>-1</sup>	
Pulse rate (enhanced)	20 min <sup>-1</sup> - 300 min <sup>-1</sup>	
Measuring accuracy:		
<ul> <li>SpO<sub>2</sub> (no patient movement)</li> </ul>	60% - 70% ± 3 A <sub>rms</sub>	
	$60\% - 100\% \pm 2 A_{rms}$	
	<60% not specified	
<ul> <li>SpO<sub>2</sub> (patient movement)</li> </ul>	70% - 100% ± 3 A <sub>rms</sub> <sup>c</sup>	
	<70% not specified

<ul> <li>Pulse rate (patient movement)</li> </ul>	-	
Resolution:		
<ul> <li>Oxygen saturation (SpO<sub>2</sub>)</li> </ul>	1 %	
Pulse rate	1 min <sup>-1</sup>	
IEC 60601-1: Medical electrical device, type BF		

a.Validated by clinical tests in which the sensor values measured were compared to those of the arterial CO oximetry of healthy adults over the specified range of functional oxygen saturation.

b.As the measurements of pulse oximeters are statistically distributed, only approximately two-thirds of these measurements will probably fall in the range from  $\pm A_{RMS}$  (accuracy root mean square) of the value measured by CO oximeters.

c.Tested with a Fluke Index II Oximeter Tester (all movement patterns).

#### Manual input of vital signs

Measuring ranges for manual input of vital signs		
Measuring range for blood pressure		
Systolic BP	25 mmHg - 280 mmHg	
Diastolic BP	10 mmHg - 220 mmHg	
Pulse rate	25 min <sup>-1</sup> - 240 min <sup>-1</sup>	
Temperature	32 °C - 44 °C (89,6 °F - 111,2 °F)	
SpO <sub>2</sub>	0 % - 100 %	

# 12.4 Analysis parameters

# NOTE

These instructions for use describe the maximal available functional scope of the device. The actual functional scope of your device may be less than this.

Analysis parameter	Display	Analysis module
Body mass index (BMI)	Absolute in kg/m <sup>2</sup>	Development/growth
Weight (W)	Absolute in kg	Development/growth
Height (H)	Absolute in m	Development/growth
Blood pressure, non-invasive (NIBP)	Absolute in mmHg	Vital signs
Body temperature (TEMP)	Absolute in °C	Vital signs
Pulse rate (PR)	Absolute in min <sup>-1</sup> (based on NIBP or SpO <sub>2</sub> )	Vital signs
Oxygen saturation (SpO <sub>2</sub> )	Relative in %	Vital signs

## 12.5 Analysis modules

## NOTE

These instructions for use describe the maximal available functional scope of the device. The actual functional scope of your device may be less than this.

a.**seca 452** external interface module (firmware version R1.3 Build 79 or higher) required b.**seca 452** external interface module can only be retrofitted by authorized service technicians

## 15. DISPOSAL

- → Device
- → Batteries and rechargeable batteries
- → Consumables

## 15.1 Device

Do not dispose of the device with household waste. The device must be disposed of properly as electronic waste. Comply with the national provisions applicable in your country. For further information contact our service department at:

#### service@seca.com

#### 15.2 Batteries and rechargeable batteries

Spent (rechargeable) batteries should not be discarded with household waste, regardless of whether they contain harmful substances or not. As a consumer you are obliged by law to dispose of (rechargeable) batteries via the collection points set up by the municipal authorities or the retail sector. Only discard (rechargeable) batteries when fully discharged.

## **15.3 Consumables**

Do not dispose single-use items such as probe covers with household waste. Used probe covers must be treated as infectious biological waste. Comply with facility requirements and the national provisions applicable in your country.

## **16.WARRANTY**

We offer a two-year warranty from the date of delivery for defects attributable to faulty material or poor workmanship. This excludes all moveable parts such as (rechargeable) batteries, cables, power supply units, etc. Defects which are covered by the warranty shall be rectified free of charge for customers on production of the sales receipt. No further claims can be accepted. The costs of shipment in both directions shall be borne by the customer where the device is not located at the customer's premises. In the event of any damage during shipment warranty claims can only be asserted where the complete original packaging was used for shipment and the device was secured inside in the same manner as in the original packaging. You should therefore keep all packaging.

The warranty shall become null and void where the device is opened by persons not expressly authorised to do so by seca.

In the event of a warranty issue, please contact your local seca office or the dealer from whom you ordered the product.

Details on the warranty for measuring accessories, such as blood pressure cuffs,  $SpO_2$  sensors or thermometers, can be found at www.seca.com.

## **17.DECLARATION OF CONFORMITY**

**C E** <sub>0123</sub>

seca gmbh & co. kg hereby declares that the product meets the terms of the applicable European directives. The unabridged declaration of conformity can be found at: www.seca.com.

## FOR ADMINISTRATORS: CONFIGURING seca mVSA 535

- → Preparing configuration
- → User accounts
- → Making settings for measuring mode
- → Managing system components
- → Setting up peripherals

#### NOTE

- → Connecting to an EMR system
- → Clinical observations
- → Factory settings
- → Instructions for use for seca mVSA 535

This document describes the maximal equipment of the **seca mVSA 535** product family: measurement of blood pressure, temperature, oxygen saturation and bioimpedance. Depending on the actual equipment of your device, some of this information may not be relevant to your device. Pay attention to the information in this document which is relevant to your device.

#### NOTE

- This part of the user documentation contains information about configuring the device for measuring mode and for integrating it in a network.
- Integrating this device in a network containing other devices may lead to previously unknown risks to patients, operators or third parties. It is the responsibility of the operating company to determine, analyze, rate, and manage these risks.
- The functions described in this part of the user documentation are accessible only to users with administrator rights.
- Follow the information in the instructions for use → Instructions for use for seca mVSA 535.

## **1. PREPARING CONFIGURATION**

- → Administrator login
- → Configuration options

### 1.1 Administrator login

- 1. Switch on the device.
- 2. Log in as the administrator:
  - ► Initial login: → Activating initial user accounts
  - ► Routine login: continue at step 3.

3. Press the **Login** key.

	<b>.</b>		
	Seca		
			윰 (1)

## 2. USER ACCOUNTS

- → Activating initial user accounts
- $\rightarrow$  Working with user accounts

## 2.1 Activating initial user accounts

The following user accounts are available on the device initially:

- admin: (Configure and manage device)
- user: (Perform and manage measurements).

The user accounts have to be activated in order to be able to use the device:

- → Changing the password for the "admin" user account
- → Assigning a password to the "user" user account

# Changing the password for the 1. "admin" user account

1. Press the **Login** key. The login window is displayed.

		Login
seca		≡Q
		$\sim$
	0 1	000
	$\checkmark$	$\sim$
		문 ()

- 2. Press the piput field. The list of user accounts is displayed.
- Press the "admin" user account. The account is displayed in the input field.
- 4. Press the input field.
- 5. Enter the initial administrator password "1357". You are prompted to change the password.
- 6. Enter a new administrator password.

### NOTICE!

#### Data access by unauthorized persons

An insecure password may allow unauthorized persons to access patient data or device settings.

- Select a password which satisfies your institution's security requirements.
- 7. Enter the password again. The login window is displayed.
- 8. Activate the "user" user account → Assigning a password to the "user" user account.

Assigning a password to the "user" user account

#### 1. Log in using the "admin" user account.

2. Press the Users tab.

Administer user database			Logout
			Users
Search	9		System
Name	Role		Settings
admin	Admin		Peripherals
			Reset
user	Physician		
		$\sim$	

- 3. Select the "user" user account.
- 4. Enter a password.

#### NOTICE!

## Data access by unauthorized persons

An insecure password may allow unauthorized persons to access patient data or device settings.

- Select a password which satisfies your institution's security requirements.
- 5. Enter the password again.
- Press the **Save** key. The password has been saved. The "user" user account can be used.
- 7. Configure the device as required for your specific situation → For administrators: Configuring seca mVSA 535.

#### **Editing user accounts**

#### NOTE

In stand-alone operation, only the initial user accounts are available  $\rightarrow$  Initial login. Further user accounts can only be set up if there is a connection to an EMR system.

To edit a user account, proceed as follows:

#### 1. Press the **Users** tab.

Administer user database			Logout
			Users
Search	9		System
Name	Role		Settings
admin	Admin		Peripherals
			Reset
user	Physician		
		$\sim$	

You have the following navigation options:

- Desired entry visible: Continue at step 3.
- Desired entry not visible: Continue at step 2.
- 2. Search for the desired user account in the list:

a) Press the \_\_\_\_\_ input field

b) Enter the user name using the keypad

- A hit list is displayed.
- 3. Press the desired entry.

The selected user account is displayed.

- 4. Change the user data to the extent required by pressing the relevant input field:
  - Changing a password
  - Changing user name ("user" user account only)
  - Select display language

#### NOTICE!

#### Data access by unauthorized persons

An insecure password may allow unauthorized persons to access patient data or device settings.

- Select a password which satisfies your institution's security requirements.
- Use the user accounts without password protection only for special applications (e.g. configuring interfaces with EMR systems). seca Service will be pleased to assist if you have any questions relating to interface configuration.

The display language is specified for each user individually. If no user is logged in, the user interface is displayed in the system language → Making regional settings.

- 5. Ensure that the **Password protected** field is activated (default setting).
- 6. Press the **Save** key.
  - The changes will be saved.

## 3. MAKING SETTINGS FOR MEASURING MODE

- → Making regional settings
- → Setting display brightness and volume
- → Calibrating the touchscreen display
- → Setting units of measurement
- → Deactivating analysis modules
- → Making presets for vital signs measurement

## 3.1 Making regional settings

#### CAUTION!

#### Loss of data, misinterpretation of measurements

Incorrect settings for date and time may lead to misinterpretation of measurements.

- Stand-alone operation: Ensure that the date and time information on the device is correct.
- Network operation: Ensure that the date and time information in the seca software is correct. These settings are adopted by the device.
- 1. Press the **Settings** tab.

Settings		Logout
		Users
Display and volume	Regional settings	System
		Settings
Units	Analysis modules	Peripheral
		Reset
Vital signs		
		문, 1

#### 2. Press the Regional settings key.

Regional settings	×	2	Logout	
Svetom Janguaga		ן נ	Users

U.S. English			Settings	٦
07.07.2020	dd.mm.yyyy		Periphera	al
Time			Reset	
20:46:10	24 h 🚽			
Name style				
First name Surname	With separator		물	Î

- 3. Specify the regional settings by pressing the relevant input field:
  - Select system language
  - Select decimal separator
  - Enter date
  - Select date format
  - ► Enter time
  - Select time format
  - Select naming convention
  - Activate/deactivate name hyphen

- The user interface is shown in the system language if no user is logged in to the device. If a user is logged in, the user interface is displayed in the individual display language  $\rightarrow$  User accounts.
- Settings you make in this tab are active directly. You do not need to save or confirm them.

### 3.2 Setting display brightness and volume

#### 1. Press the Settings tab.

2.

Settings		Logout
		Users

Key tones		
	$\left \right>$	ห. 1

#### 3. Press the Calibrate touchscreen key.

4. Confirm that you wish to proceed. The calibration display appears:

+			

- 5. Press the symbol with a stylus. The symbol changes position.
- Press the symbol with a stylus again.
   The symbol changes its position again.
- 7. Repeat step 6. until you get a request to confirm calibration.
- 8. Confirm calibration. The touchscreen display is calibrated.

If calibration is not confirmed, the procedure re-starts after a few seconds.

## 3.4 Setting units of measurement

In order to avoid misinterpretations, measuring results for medical use must be displayed and used in SI units (weight: kilogrammes, length: metres) only. Some devices offer the ability to display measuring results in other units. This is only an additional function.

- ► Use the results exclusively in SI units.
- The use of measuring results in non-SI units is the sole responsibility of the user.
- 1. Press the **Settings** tab.

Settings		Logout
		Users
Display and volume	Regional settings	System

## 3.6 Making presets for vital signs measurement

- → Presets for blood pressure
- → Presets for pulse rate (seca measuring equipment only)
- $\rightarrow$  Presets for SpO<sub>2</sub>
- → Presets for temperature (COVIDIEN<sup>TM</sup> FILAC<sup>TM</sup> 3000 only)
- → Selecting color mode for Vital signs tab

In the **Settings** tab, you can set up the settings for blood pressure, temperature and  $SpO_2$  measurements preferred in your institution.

The user can modify the settings during a measurement procedure

→ Measuring vital signs. The presets will be active again after the end of the measurement.

For the Vital signs tab, you can select a color mode to enable the device to be read perfectly whatever the illumination conditions. This function is not available for other tabs.

#### Presets for blood pressure

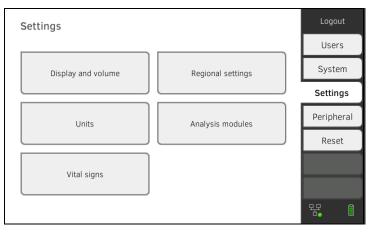

- → Making general settings
- → Configuring multiple measurement

#### NOTE

This is where to specify default settings which the user can modify for the respective current measurement procedure. The settings from the default settings then become active again.

#### Making general settings

1. Press the Settings tab.

2. Press the Vital signs key.

Vital signs		Logout

		윰 ()

#### 2. Press the Data management key.

Data management	×	Logout
		Users
Export system log	Export	System
Backup patient data	Backup	Settings
Restore patient data	Restore	Peripheral
Clinical observations configuration:	Restore	Reset
no clinical observations defined		Sys. test
Delete clin. obs. configuration		1

- 3. Connect a USB memory stick to the monitor.
- 4. Press the Backup (Backup) key.
- 5. Enter a password to encrypt the data.

#### NOTICE!

#### Data access by unauthorized persons

An insecure password may allow unauthorized persons to access patient data.

- Select a password which satisfies your institution's security requirements.
- Enter the password again to confirm it. The data are exported to the USB memory stick.
- 7. Archive the data in line with your institution's policy.

Restoring patient and user data manually

This function allows you to restore externally backed-up seca patient files and user accounts.

## NOTICE!

#### Data loss

When you restore externally backed-up data, the current data on the device will be overwritten.

- Export seca patient files and user accounts manually before restoring older data manually.
- 1. Load the archived seca patient files and user accounts onto a USB memory stick.
- 2. Press the **System** tab.

System information		Logout
		Users
Monitor	SmartBucket	System
		Settings
Data management	Power management	Peripheral
		Reset
		문 ()

#### 3. Press the **Data management** key.

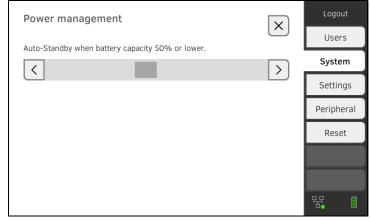

Data management	×	Logout
		Users

no clinical observations defined		Sys. test
Delete clin. obs. configuration		<b>†</b>

- 4. Connect the USB memory stick to the monitor.
- 5. Press the **Restore** key.
- 6. Enter the password you assigned on export to decrypt the data. The data are imported.

## 4.5 Power management

You can specify from which battery charge status (in %) the device shuts down and switches off.

- 1. Press the **System** tab.
- 2. Press the **Power management** key. The current setting is displayed (default setting: 50 %).

- 3. Set the desired battery charge status from which the device is to shut down and switch off.
  - Press the key to switch off the device at a lower battery charge status (minimum: 10 %).
  - Press to switch off the device at a higher battery charge status (maximum: 100 %).

## 5. SETTING UP PERIPHERALS

- → Setting up a LAN connection to the network (stationary operation)
- → Setting up a WiFi connection (mobile operation)
- → Setting up a connection to the seca connect 103 software
- → Setting up a seca 360° proximity connection

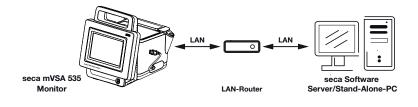

## 5.1 Setting up a LAN connection to the network (stationary operation)

- → Introduction
- → Activating the LAN connection
- → Deactivating the LAN connection

#### Introduction

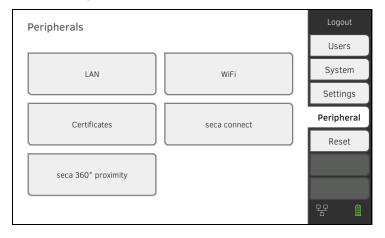

For stationary use, for example, in a treatment room in your practice, you can connect the monitor to your LAN network to exchange data using the **seca connect 103** software.

A requirement for exchanging data with the **seca connect 103** software is that the **seca connect 103** software is installed on a server and the configuration of the **seca connect 103** software (server IP and connect port) is known.

#### Activating the LAN connection

#### 1. Press the Peripherals tab.

2. Press the **LAN** key.

Set LAN connection		×	Logout
		$(\frown)$	Users
LAN active	О ОНСР		System
IP address	Default gateway		Settings
172.16.0.245	172.16.0.254		Peripherals
Netmask			Reset
MAC address:			
			윰 🏾 🗎

- 3. Press the **LAN active** checkbox. The LAN function is activated.
- 4. Make the setting applicable to your network:
  - ► To set up connection manually, continue at step 5.
  - ► To set up automatic connection: Press the DHCP key and continue with → Setting up a connection to the seca connect 103 software

Set LAN connection		×	Logout
			Users
LAN active	DHCP		System
IP address	Default gateway		Settings
172.16.0.245	172.16.0.254		Peripherals
Netmask			Reset
255.255.255.0			
MAC address:			
			명 ()

- 5. Make the settings relevant to your network:
  - Enter the IP address of the monitor (last three digits must be different from the PC address)
  - Enter netmask (must match the netmask of the PC)
  - Enter default gateway (if available)

Set LAN connection		X	Logout
		$\frown$	Users
LAN active	О ОНСР		System
IP address	Default gateway		Settings
172.16.0.245	172.16.0.254		Peripherals
Netmask			Reset
255.255.255.0			
MAC address:			
			윰 ()

## 모모

The symbol is displayed on the monitor. The LAN connection is set up.

#### NOTE

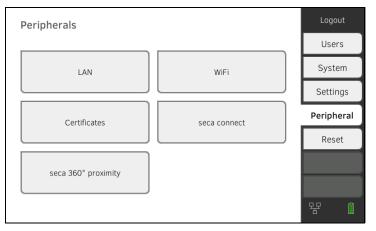

Settings you make in this dialog window are active directly. You do not need to save or confirm them.

 Set up the connection to the seca connect 103 software → Setting up a connection to the seca connect 103 software

## **Deactivating the LAN connection**

1. Press the **Peripherals** tab.

2. Press the **LAN** key.

Set LAN connection		×	Logout
		$\sim$	Users
LAN active	О ОНСР		System
IP address	Default gateway		Settings
172.16.0.245	172.16.0.254		Peripherals
Netmask			Reset
255.255.255.0			
MAC address:			명 ()
Press the <b>I AN active</b> check	hoy		

- 3. Press the **LAN active** checkbox. The LAN function is deactivated. The connection data are deleted.
- 4. To reactivate the LAN function, proceed as outlined below:
  - a) Press the  $\ensuremath{\textbf{LAN}}$  active checkbox
  - b)  $\rightarrow$  Activating the LAN connection

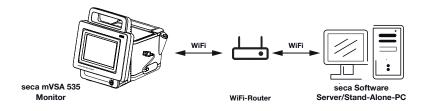

## 5.2 Setting up a WiFi connection (mobile operation)

- → Introduction
- → Activating the WiFi connection
- → Deactivating the WiFi connection

Introduction

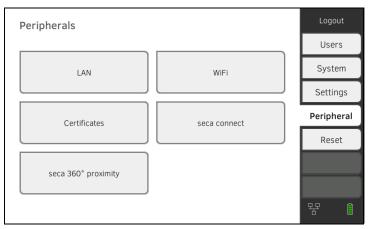

For mobile use, for example, on the ward of a hospital, you can integrate the device into your network as a WiFi client to exchange data with the **seca connect 103** software.

A requirement for exchanging data with the **seca connect 103** software is that the **seca connect 103** software is installed on a server and the configuration of the **seca connect 103** software (server IP and connect port) is known.

### Activating the WiFi connection

### 1. Press the **Peripherals** tab.

- Make sure that the LAN connection to the network is **not** active → Deactivating the LAN connection.
- 3. Press the WiFi key.

×	Users
	System
Hidden network	Settings
scan WiFi	Peripherals
	Reset
	Hidden network

17-10-05-395-002\_12-2021B

- 4. In the WiFi mode drop-down menu, press the WiFi client (network) setting.
- 5. Make the setting applicable to your WiFi network:
  - Visible network: Press the Scan WiFi key
  - ► Hidden network: Press the Hidden network key
- 6. Enter the SSID for your network:
  - Visible network: Select SSID from drop-down menu
  - Hidden network: Enter SSID manually
- 7. Enter the user name and password for the network.

### NOTE

In some networks, no user name is required. In this case, the input field is grayed out.

8. Press the key to confirm your entry. The connection is established.

symbol is displayed on the monitor. The The device is connected to your network via WiFi.

9. Set up the connection to the seca connect 103 software → Setting up a connection to the seca connect 103 software

### 1. Press the **Peripherals** tab.

Peripherals		Logout

3. In the WiFi mode drop-down menu, press the WiFi off setting.

### **Deactivating the WiFi connection**

4. Press the key to confirm your entry. The WiFi function is deactivated. The connection data are deleted.

## 5.3 Setting up a seca 360° proximity connection

Use a **seca 360° proximity** connection to adopt measured values from compatible seca measuring devices (scale, measuring rod, measuring station).

seca mVSA 535

The following requirements must be met in order to connect:

- The seca measuring device is equipped with either a **seca 452** external interface module or with an internal interface module (in each case firmware version R1.3 Build 79 or higher).
- The seca measuring device is connected to your LAN or WiFi network.
- The seca measuring device is configured as follows:
  - Scan user ID: Required
  - Scan patient ID: Required
  - Confirmation of measurement on seca measuring device: Required
  - Port used: Port configured for communication with the seca connect 103 software (default: 22020) → Setting up a connection to the seca connect 103 software

### NOTE

Information about how to configure your seca measuring device can be found in the **seca 103/452** system instructions for use.

Proceed as follows to connect the seca measuring device:

1. Press the Peripherals tab.

Peripherals		Logout
		Users
LAN	WiFi	System
		Settings
Certificates	seca connect	Peripheral
		Reset
seca 360° proximity		
		명 ()

 Press the seca 360° proximity key. The seca 360° proximity (seca 360° proximity) dialog window opens

seca 360° proximity				X	Logo	ut
					Usei	rs
Filter by organization ID			$\left(+\right)$	2	Syste	em
Device name	Ŧ	IP	~	~	Settir	ngs
					Periph	eral
					Res	et
				$\sim$		
				Ň	₽₽ <b>~</b> \$	

- 3. Search for available devices:
  - Press the key: Search for devices on the network
  - Press the L' key: Enter the IP address of a device
  - Put a tick next to Filter by organization ID: Only devices with the same organization ID as the seca mVSA 535 are displayed

Available devices are displayed.

seca 360° proximity	×	Logout
		Users
Filter by organization ID	(+) (5)	System
Device name	IP –	Settings
Systemtest Breaker	172.16.0.196	Peripheral
SECA 555 BIA - RD Showroom	172.16.0.246	Reset
Q4 Karl WLAN	172.16.0.55	
Zorg LAN	172.16.0.58	
_TiffyTestBox1	172.16.0.70	

### NOTE

Information about how you assign organization IDs can be found here → Making workflow settings (for seca mVSA 535) and in the seca 103/452 system instructions for use (for connected devices). 4. Press the desired device in the list.

seca 360° proximity			×	Logou	ut
		_		User	s
Filter by organization ID		+	-] [ว]	Syste	m
Device name	- IP			Settin	gs
Systemtest Breaker	172	2.16.0.196		Periphe	eral
SECA 555 BIA - RD Showroom	172	2.16.0.246		Rese	t
Q4 Karl WLAN	172	2.16.0.55			
Zorg LAN	172	2.16.0.58			
_TiffyTestBox1	172	2.16.0.70		뮧	

The device is marked blue in the list.

The connection is set up.

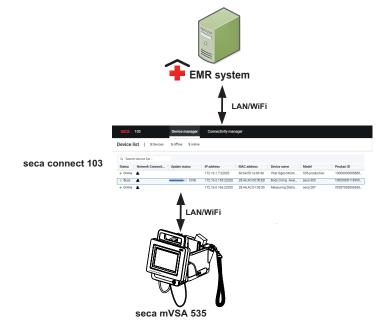

In measuring mode, the seca measuring device is reserved as soon as a patient file is called up. The device is released again once the measurement is stopped  $\rightarrow$  Receiving weight and height (seca 360° proximity).

## 6. CONNECTING TO AN EMR SYSTEM

- → Information about user and patient data
- → Assigning a clear device name
- → Setting up a connection to the seca connect 103 software
- → Configuring data transfer to the EMR system
- → Use of certificates
- → Summary: Device behavior when connected to an EMR system

You can connect the device to compatible EMR systems via the **seca connect 103** software.

seca recommends performing this integration exclusively in collaboration with seca Service and the manufacturer of your EMR system.

The following functions are available when you connect to an EMR system:

- Log in to device with EMR system user ID
- Call up EMR system patient data on the device
- Submit measured results to the EMR system

Information about the measuring sequence when you connect to an EMR system can be found here:  $\rightarrow$  Operation when connected to an EMR system.

### 6.1 Information about user and patient data

When connecting to an EMR system, the following changes apply to the management of user and patient data:

- User IDs for medical staff can only be set up in the EMR system.
- Patient files can only be managed in the EMR system.
- User IDs for administrators and service technicians can only be set up on the device.

## 6.2 Assigning a clear device name

For the device to be connected to an EMR system, it needs to be assigned a clear device name. The device transmits a heartbeat to the network under this device name every 30 seconds.

To assign a device name, proceed as follows:

- 1. Log in as administrator.
- 2. Press the **System** tab.

System information	Logout
	Users
Monitor SmartBucket	System
	Settings
Data management Power management	Peripheral
	Reset
	윰 ()

### 3. Press the **Monitor** key.

The **Monitor** dialog window is shown:

	Logout
Monitor X	Logout
	Users
Details Monitor Software update Monitor	System
Device name	Settings
Example 2	Peripheral
Information Monitor	Reset
Serial number: 76543217654321	
Software version: 1.0.1153 INT	
	물

- 4. Enter a clear device name in line with the naming conventions of your institution:
  - a) Press the Device name input field

## 6.3 Setting up a connection to the seca connect 103 software

- → Entering connection data
- → Making workflow settings

The device must be connected to the **seca connect 103** software in order to be able to communicate with your EMR system.

The following requirements must be met for this:

- The device is connected to your LAN or WiFi network
- The server address and port for the **seca connect 103** are known
- The EMR system is connected to the **seca connect 103** software. Information on this can be found in the **seca 103/452** system instructions for use (from version 2.0 or higher)

### NOTE

- Follow the information in this section of the document → Monitor interfaces and network ports.
- Information on connecting the EMR system to the seca connect 103 software can be found in the seca 103/452 system instructions for use (from version 2.0 or higher)

### **Entering connection data**

1. Press the **Peripherals** tab.

Peripherals		Logout
		Users
LAN	WiFi	System
		Settings
Certificates	seca connect	Peripheral
		Reset
seca 360° proximity		
		윰 ()

### 2. Press the seca connect key. The seca connect configuration dialog window opens.

3. In the **Connect Mode** drop-down menu, select the option **seca connect 103**.

seca connect configuration	on 🗸 🗙	Logout
		Users
Connect Mode	seca connect 103	System
		Settings
Connect Server IP	0.0.0.0	Peripherals
Connect Port	22020	Reset
	$\rightarrow$	

- 4. Enter the connection data for the seca connect 103 software:
  - Enter the IP address of the server on which the seca connect 103 is installed
  - Enter the port for the **seca connect 103** (recommended: 22020)

You have the following options for continuing:

You can specify the following settings for the measuring sequence and for communication with the EMR system:

- Password settings for the user ID
- Scan sequence for user and patient ID
- Permit offline measurements if the EMR system connection is interrupted (recommended for mobile use or difficult WiFi reception conditions)
- Enter an organization ID to assign the device to a department in your institution, for example
- 1. Press the **Peripherals** tab.

Peripherals	Logout
	Users
LAN WiFi	System
	Settings
Certificates seca connect	Peripheral
	Reset
seca 360° proximity	
	윰 🏾

- 2. Press the seca connect key.
- 3. Ensure that in the **Connect Mode** drop-down menu, the option **seca connect 103** is selected.
- Press the key. The seca connect 103: Workflow page is displayed.

seca connect 103: Workflow		
User/patient ID: permit any scan sequence		
Allow offline measuren	nents	
User ID	required, with password	
Organization ID	791430	
Tenant ID		
$\boldsymbol{<}$		

### Making workflow settings

- 5. Specify the settings for the scan sequence for user ID and patient ID:
  - Sequence for ID scan permanent: 1. User, 2. Patient
    - Sequence for ID scan flexible
- 6. Specify whether measurements are to be possible even if the connection to the EMR system is interrupted (offline measurements):
  - Do not allow offline measurement
     Allow offline measurements

#### NOTE

Offline measurements are temporarily saved in the **Unsubmitted measurements** list. When the connection to the EMR system is active again, the measurements can be called up, assessed, and submitted to the EMR system  $\rightarrow$  Using the Unsubmitted measurements list.

- 7. Under User-ID, specify whether a password is required for login:
  - Password must be entered (recommended)
  - No password required
- 8. If desired, enter an **Organization ID** to assign the device to a department in your institution, for example.
- 9. If desired, enter a **Tenant ID** to assign the device to a larger administrative entity in your institution, for example.
- 10. Adopt the settings:

### 6.4 Configuring data transfer to the EMR system

seca recommends performing the data transfer to the EMR system only in collaboration with seca Service and the manufacturer of your EMR system.

### NOTE

More information on this can be found in the **seca 103/452** system instructions for use (from version 2.0 or higher).

## 6.5 Use of certificates

The device is prepared for the use of certificates. If you wish to use this function, please contact seca Service.

## 7. CLINICAL OBSERVATIONS

- → Specified settings for the configuration file
- → Loading the configuration file onto the device and updating it
- → Deleting configuration file

The device gives you the option of recording clinical observations. Your institution can specify the content individually in a configuration file which is loaded onto the device.

### NOTE

- This function is only available to you if the device is connected to an electronic medical records system (EMR).
- Inform the staff in your in your institution about the option of recording clinical observations on the device before this function is available.
- Ensure that all the settings for this function meet the specifications of your institution and are compatible with your EMR system.

The configuration file is not part of the scope of delivery. You create the configuration file for the overall integration solution in consultation with seca Service.

If you wish to use this function, please contact seca Service.

## 7.1 Specified settings for the configuration file

	$\rightarrow$ Options for input
	→ Definition of mandatory fields
	→ Language selection
Options for input	Three types of options for input with configurable limit values are available for recording clinical observations:
	<ul> <li>Simple selection via option field: Selection from a freely-definable list with a maximum of seven entries</li> </ul>
	<ul> <li>Free text: Input of any alphanumerical text with a freely-configurable minimum and maximum length</li> </ul>
	<ul> <li>Numerical value: Input of any numerical value in a freely-configurable range of values</li> </ul>
	A maximum of 24 parameters can be defined in total.
Definition of mandatory fields	It is possible to define for each parameter whether the input is mandatory or optional:
	<ul> <li>Mandatory field (marked orange): Clinical observations can only be submitted to the EMR system if this parameter has been filled in by the user.</li> <li>Optional field: Clinical observations can be submitted even if this param-</li> </ul>
	eter has not been filled in.
Language selection	The configuration file cannot be translated. The texts in the "Clinical observa- tions" section of the device are displayed in the way they were defined as text in the configuration file.
	T

## 7.2 Loading the configuration file onto the device and updating it

The configuration file for clinical observations is loaded onto the device via the connection to the **seca connect 103** software. Further information is available in the **seca 103/452** system instructions for use.

The configuration can be changed by loading another configuration file onto the device.

### NOTE

- If you want to update or delete the configuration file, there must not be any unsubmitted clinical observations saved on the device. Submit all saved clinical observations → Submitting the measurement.
- You can assign a version name in the configuration file in the form of free text. The version name of the currently loaded configuration file is displayed in the **System** tab, **Data management** key.

Data management	X	Logout

### 8.2 Resetting the device

Use the **Reset device** function to reset the device to factory settings  $(\rightarrow \text{Overview of factory settings})$ . seca patient files and user accounts are deleted from the device in this process.

NOTE

If seca patient files and user accounts are to be retained, proceed as described in the section entitled  $\rightarrow$  Resetting the user interface.

### 1. Press the Reset tab.

	✓
	Reset
	Peripheral
	Settings
Reset device Reset GUI	System
VNC access	Users
Reset	Logout

2. Ensure that seca patient files and user accounts have been exported.

 Press the **Reset device** key. seca patient files and user accounts will be deleted. The device will be reset to factory settings (→ Overview of factory settings).

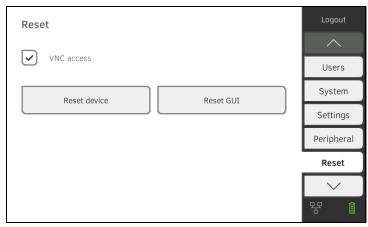

### 8.3 Resetting the user interface

Use the **Reset GUI** function to reset the user interface (GUI = Graphical User Interface) of the device to factory settings ( $\rightarrow$  Overview of factory settings). seca patient files and user accounts will be retained in this process.

### NOTE

If all seca patient files and user accounts are to be removed from the device, proceed as described in the section entitled  $\rightarrow$  Resetting the device.

1. Press the Reset tab.

### 2. Press the Reset GUI key.

The graphical user interface will be reset to factory settings ( $\rightarrow$  Overview of factory settings).

seca patient files and user accounts will be retained.

## 8.4 Exporting the system log/audit trail

This function allows you to export the system log/audit trail and make it available to seca Service for support purposes, for example.

- 1. Press the **System** tab.
- 2. Press the **Data management** key.

Data management	Logout
	Users
Export system log Expo	ort System
Backup patient data Back	Settings
Restore patient data	Peripheral
Clinical observations configuration:	Reset
-	Sys. test
no clinical observations defined	
Delete clin. obs. configuration	

- 3. Press the **Export** key.
- 4. Connect a USB memory stick to the monitor.
- 5. Press the **Export system log** key. The system log/audit trail is exported.

## 8.5 Enabling VNC access

With a VNC connection, you can reproduce the user interface of the device on a PC screen and remotely control the device from the PC. The requirement is that a VNC viewer is installed on the PC.

### NOTE

This function is intended purely for demonstration purposes. The monitor display on the PC screen varies depending on the setting of your VNC connection. We recommend a low bandwidth for a stable VNC connection.

1. Press the Reset tab.

Reset	Logout
	$\sim$
VNC access	Users
Reset device Reset GUI	System
	Settings
	Peripheral
	Reset
	$\sim$
	윰 ()

### 2. Press the $\ensuremath{\text{VNC}}$ access checkbox.

 Restart the device. The VNC service of the device is started.

4. Set up the VNC connection using the VNC viewer of your PC.
